Initial Post

Robert, who is 11 years old, undergoes regular examinations and is observed by medical specialists from an early age. He is experiencing complications provoked by an illness described as major issues connected with his chromosomes' condition. This sickness is believed to be a genetic disease characterized by a microdeletion on chromosomal 22's long arm (Kraus et al., 2018). Autism spectrum syndrome and attention deficit hyperactivity issues are more prevalent among children with this disease. Kidney difficulties, schizophrenia, hearing problems, and inflammatory illnesses, including rheumatoid arthritis, are linked to this condition. Multiple later-onset illnesses, such as autoimmune disease, overweight, and mental disorder, are more probable to appear in individuals.

Congenital cardiac abnormalities, unique facial traits, recurrent infections, developmental disorders, learning challenges, and birth defects are these illness's common symptoms. The symptoms of this illness differ tremendously, even within family members, and it impacts many different regions of the body (Sullivan, 2019). Other congenital problems that affected people may have as neonates include renal anomalies and substantial feeding complications. Gastrointestinal discomfort is also fairly frequent in this patient group and clinical setting. Genetic screening is considered the method that serves as a marker of the diagnosis, which is predicted based on the clinical symptoms due to the substantial number of clinical manifestations and the range of appearances. It is suspected in individuals who exhibit one or more chromosomal deletion indications. Inadequate penetrance is a feature of this disease; as a result, numerous variations can occur in clinical expression between people.

Considering the particular situation and the case description, it is feasible to propose jaundice as Brendan's illness. Due to elevated bilirubin levels, jaundice, also referred to as icterus, causes a yellowish or greenish coloration of the skin and white parts of the eyes. In adults and seniors, jaundice is generally a symptom of serious
