Spencer, George M. Bodner, Lyman H. Rickard, 2010-12-28 Chemistry Structure and Dynamics 5th Edition emphasises deep understanding rather than comprehensive coverage along with a focus on the development of inquiry and reasoning skills While most mainstream General Chemistry texts offer a breadth of content coverage the Spencer author team in contrast focuses on depth and student preparation for future studies The fifth edition is revised in keeping with our commitment to the chemical education community and specifically the POGIL Process Oriented Guided Inquiry Learning Project This text reflects two core principles first that the concepts that are covered are fundamental building blocks for understanding chemistry and second that the concepts should be perceived by the students as being directly applicable to their interests and careers The authors further provide this core coverage using 1 of 3 models data driven chemical theories and student understanding which allows for a more concrete foundation on which students build conceptual understanding

Abraham, Michael J. Pavelich, 1999-05-20 The laboratory course should do more than just acquaint the students with fundamental techniques and procedures The laboratory experience should also involve the students in some of the kinds of mental activities a research scientist employs finding patterns in data developing mathematical analyses for them forming hypotheses testing hypotheses debating with colleagues and designing experiments to prove a point For this reason the student tested lab activities in *Inquiries into Chemistry* 3 E have been designed so that

students can practice these mental activities while building knowledge of the specific subject area. Instructors will enjoy the flexibility this text affords. They can select from a comprehensive collection of structured guided inquiry experiments and a corresponding collection of open inquiry experiments depending on their perception as to what would be the most appropriate method of instruction for their students. Both approaches were developed to encourage students to think logically and independently to refine their mental models and to allow students to have an experience that more closely reflects what occurs in actual scientific research. Thoroughly illustrated appendices cover safety in the lab, common equipment and procedures.

The Big Book of Chemistry Teacher Stories Jeff Lark, Stories from years of teaching high school chemistry
Take-Home Chemistry Michael Horton, 2011 For high school science teachers, homeschoolers, science coordinators and informal science educators, this collection of 50 inquiry-based labs provides hands-on ways for students to learn science at home safely. Author Michael Horton promises that students who conduct the labs in *Take Home Chemistry* as supplements to classroom instruction will enhance higher-level thinking, improve process skills and raise high-stakes test scores.

Problems and Problem Solving in Chemistry Education Georgios Tsapalis, 2021-05-17 Problem solving is central to the teaching and learning of chemistry at secondary, tertiary and post-tertiary levels of education, opening to students and professional chemists alike a whole new world for analysing data, looking for patterns and making deductions. As an important higher-order thinking skill, problem solving also constitutes a major research field in science education. Relevant education research is an ongoing process with recent developments occurring not only in the area of quantitative computational problems but also in qualitative problem solving. The following situations are considered: some general others with a focus on specific areas of chemistry: quantitative problems, qualitative reasoning, metacognition and resource activation, deconstructing the problem solving process, an overview of the working memory hypothesis, reasoning with the electron pushing formalism, scaffolding organic synthesis skills, spectroscopy for structural characterization in organic chemistry, enzyme kinetics, problem solving in the academic chemistry laboratory, chemistry problem solving in context, team-based active learning, technology for molecular representations, IR spectra simulation and computational quantum chemistry tools. The book concludes with methodological and epistemological issues in problem solving research and other perspectives in problem solving in chemistry. With a foreword by George Bodner.

Paving the way towards authentic chemistry teaching - A contribution to teachers' professional development Andrea Schumacher, 2015-05-15 Ein angemessenes Verständnis der Naturwissenschaften stellt eine Schlüsselkomponente naturwissenschaftlicher Grundbildung dar. Für die entsprechende unterrichtliche Gestaltung spielen die Vorstellungen der Lehrkräfte der Naturwissenschaften eine entscheidende Rolle, und anwendbares Meta-Wissen gilt als zu erreichende Qualifikation im Lehramtsstudium. Im vorliegenden Forschungsprojekt wird im Rahmen von qualitativen Studien erhoben, welche Vorstellungen Lehramtsstudierende der Chemie als Naturwissenschaft besitzen und wie die Studierenden unterstützt werden können, ein fundiertes Verständnis zu entwickeln und

dieses praktisch zu transformieren Auf Grundlage der Ergebnisse wird ein Modul für die Lehrerbildung entwickelt das den Weg bereitet authentisch Chemie zu unterrichten An adequate understanding about science represents one key component of scientific literacy Teachers conceptions about science play a crucial role for the design of appropriate lessons and applicable meta knowledge is considered as a qualification to be achieved during university teacher education In this thesis qualitative studies are conducted to evaluate which pre conceptions about chemistry as a science teacher students possess and how students can be supported in developing an informed understanding as well as in practically transforming it On the basis of the results a module for teacher education is developed which paves the way for authentic chemistry teaching
