Moon Phases Cut and Paste Vocabulary

							
First Quarter	Waxing Crescent	New Moon	Waxing Gibbous	Third Quarter	Waxing Crescent	Waning Gibbous	Full Moon
A small sliver of the Moon's right side becomes visible and grows larger each night.	Half of the Moon's left side is lit, and it continues to decrease.	The entire face of the Moon is illuminated and fully visible from Earth.	A small sliver of light remains on the left side before fading into the new moon again.	More than half of the Moon is lit, and the lighted portion continues to grow.	The moon is between the sun and earth and is not visible.	Half of the Moon's right side is illuminated and visible from Earth.	The lighted portion begins to shrink, with most of the left side still visible.
