Cellular Solids Lorna J. Gibson, Michael F. Ashby, 1997 In this new edition of their classic work on Cellular Solids the authors have brought the book completely up to date including new work on processing of metallic and ceramic foams and on the mechanical electrical and acoustic properties of cellular solids Data for commercially available foams are presented on material property charts two new case studies show how the charts are used for selection of foams in engineering design Over 150 references appearing in the literature since the publication of the first edition are cited The text summarises current understanding of the structure and mechanical behaviour of cellular materials and the ways in which they can be exploited in engineering design Cellular solids include engineering honeycombs and foams which can now be made from polymers metals ceramics and composites as well as natural materials such as wood cork and cancellous bone **Cellular**

Solids Lorna J. Gibson, M. F. Ashby, 1988 *Cellular and Porous Materials in Structures and Processes* Holm Altenbach, Andreas Öchsner, 2011-01-27 The book covers the state of the art treatment in modelling and experimental investigation of the mechanical behaviour of cellular and porous materials Starting from the continuum mechanical modelling to the numerical simulation several important questions related to applications such as the fracture and impact behaviour are covered **Dynamics of Lattice Materials** A. Srikantha Phani, Mahmoud I. Hussein, 2017-09-25 Provides a comprehensive introduction to the dynamic response of lattice materials covering the fundamental theory and applications in engineering practice Offers comprehensive treatment of dynamics of lattice materials and periodic materials in general including phononic crystals and elastic metamaterials Provides an in depth introduction to elastostatics and elastodynamics of lattice materials Covers advanced topics such as damping nonlinearity instability impact and nanoscale systems Introduces contemporary concepts including pentamodes local resonance and inertial amplification Includes chapters on fast computation and design optimization tools Topics are introduced using simple systems and generalized to more complex structures with a focus on dispersion characteristics Shell Structures: Theory and Applications Wojciech
