Central Nervous System Trauma S. Tsuyoshi Ohnishi, Tomoko Ohnishi, 1995-07-27 Central nervous system trauma which encompasses stroke subarachnoid hemorrhage head injury and spinal cord injury is a leading cause of death in developed countries In the search for underlying mechanisms membrane involvement has been the common link This fourth volume in the Membrane Linked Diseases series is therefore dedicated to research on CNS trauma Focusing on the mechanism of membrane damage Central Nervous System Trauma Research Techniques presents a variety of experimental techniques to study the mechanism of CNS trauma Animal and tissue culture models provide the bulk of the research findings in this area Possible pharmacological interventions are analyzed This volume offers numerous illustrative examples including full color figures This book serves as a valuable resource for students and researchers assisting in the comprehension of current trends in CNS trauma and helping to stimulate the discovery of new research areas

Cellular Membrane S. Tsuyoshi Ohnishi, Tomoko Ohnishi, 1992-09-29 Cellular Membrane A Key to Disease Processes focuses on cellular membranes as a key to unlocking important new information about the pathological processes of strokes heart attacks diabetes cancer and other major diseases The clinical relevance of basic research is particularly emphasized Topics include calcium ions and calcium channel blockers membrane ion channels and diabetes membrane perturbation by asbestos fibers and disease membrane receptors and signal transduction in tumor cells anti HIV compounds with membrane oriented specificity and neuroleptic malignant syndrome Cellular Membrane A Key to Disease Processes is filled with illustrations schemes exciting ideas and provocative hypotheses that are bound to lead to the development of new pharmacological techniques It will prove to be an excellent reference guide for cell biologists and pathologists

Nitric Oxide Protocols M. A Titheradge, 2008-02-05 Michael Titheradge provides both the experienced researcher and the newcomer with time tested techniques to cover all aspects of NO synthase and metabolism Topics range from the cloning and expression of the different isoforms of NO synthase to the role of NO in DNA damage and apoptosis and include indirect and direct measurements of NO production measurement on NO synthase mRNA both in situ and in vitro and Western blotting and immunohistochemical localization of different isoforms of NO synthase A variety of alternative techniques are described to enable researchers to set up an assay using either the simplest equipment or the most expensive EPR machines

Hsien-Yuan Lane, Chieh-Hsin Lin, Kenji Hashimoto, 2020-01-15 *Induction of Central Nervous System Disease by the Adaptive Immune Response* Robert Weissert, Fabienne Brilot, 2017-11-23 Over the last years it has become evident that many

neurological diseases of the central nervous system CNS are induced by a specific adaptive immune response directed against molecules expressed on CNS resident cells Well recognized examples are anti N Methyl D Aspartate Receptor NMDAR encephalitis which is characterized by the presence of antibodies against neuron expressed NMDAR or neuromyelitis optica NMO induced by antibodies to astrocyte expressed aquaporin 4 Many more examples exist and antibodies and T or and B cells have increasingly been associated with CNS disease Often the symptoms of these diseases have not been typically reported to have an immune aetiology Beside classical neurological symptoms like ataxia vision disturbance and motor or sensory symptoms these can include cognitive disturbances behavioral abnormalities or and epileptic seizures Although much has been learned regarding the pathophysiology of prototypic examples of these disorders there are still major gaps in our understanding of their biology This may be due to the fact that they are rare diseases and their therapies are still very limited This research topic includes contributions addressing the analysis of the adaptive immune response driving disease including target antigens molecular epitope mapping and factors involved in the disease pathogenesis such as complement activation cascades genetic and genomic regulation as well as environmental triggers Diagnostic criteria and methods and treatment are also discussed The overall aim of the volume is to review progress in our pathophysiological understanding of immune mediated CNS disorders in order to advance diagnostic and therapeutic approaches and ultimately improve outcomes for patients
