Chawla, 2013-03-14 Materials science and engineering MS E is by its very nature an inter disciplinary activity Researchers from a wide variety of disciplines metal lurgy ceramics physics chemistry mechanics electrical and electronic engineering etc can and do participate in the MS E activities The need and desirability of such an interdisciplinary effort is understandable inas much as advanced or high performance materials are critical for any of the modern industries It is almost a given axiom that progress in any field energy building materials transportation electronics aerospace electric power consumer products etc depends on the availability of suitable In this regard let me quote from materials having specific characteristics another work of mine It is a truism that technological development depends on advances in the field of materials One does not have to be an expert to realize that a most advanced turbine or aircraft design is of no use if adequate materials to bear the service loads and

conditions are not available Whatever the field may be the final limitation on advancement depends on materials 1 It is pertinent to quote from some other sources about a fundamental change that is occurring in the materials field A fundamental reversal in the relationship between human beings and materials has occurred Its economic consequences are likely to be profound Historically humans have adapted such natural materials as stone wood clay vegetable fiber and animal tissue to economic uses
