Combustion Laboratory, 2017 Statistical Thermodynamics John W. Daily, 2018-12-20 Clearly connects macroscopic and microscopic thermodynamics and explains non equilibrium behavior in kinetic theory and chemical kinetics Recent Developments in Power and Propulsion Applications Ashoke De, Ashwani K. Gupta, Akshai K. Runchal, Dibakar Rakshit, Abhijit Kushari, 2025-09-26 The primary focus of this contributed volume is on providing cutting edge developments in a number of critically important fields including energy combustion power propulsion environment using fossil fuels and the production and use of biofuels The availability of clean and sustainable energy is more crucial now than ever before for all areas of energy use in power mobility and propulsion In the future the energy used will only grow due to the increase in population and enhanced standards of living This book includes contributions from globally recognized specialists from various regions of the world They have provided the most recent advances in both basic and applied research on the creation of cleaner energy and its application for a variety of technologies from microscale energy conversion to supersonic and hypersonic propulsion powered by hydrocarbon fuels Clean and efficient energy conversion for various stationary and propulsion applications including hypersonic propulsion thermal management emission control and environmental issues for energy sustainability are amongst the challenges and opportunities followed for the specific applications In parallel some of the other applications include the combustion of fossil and biofuels clean energy production from low grade materials such as waste and biomass and alternative fuels via rigorous modeling and simulation with a focus on efficiency and environmental issues The present and future R D activities include specially designed technical tracks and contributions from internationally recognized technical experts that reveal different but complementary viewpoints on fuels combustion power and propulsion and air toxins The development and implementation of novel energy conversion technologies require solid fundamental understanding as well as research and development efforts at different scales from bench to pilot to full scale We conjecture that for the foreseeable future hydrocarbon fuels will likely remain a major source of energy in all sectors of power transportation and propulsion with a slow but steady increase in renewable energy resources in the overall energy mix A multifaceted strategy is needed for the energy and environmental sustainability of all power and propulsion systems This includes creating and utilizing alternative and renewable fuels designing flexible fuel combustion systems that are simple to use with the new fuels and developing cutting edge eco friendly technologies to maximize the use of all types of gas liquid and solid fuels This book provides a wealth of knowledge as a reference for practicing engineers research engineers researchers and managers in labs and industry academic institutions graduate students and senior year undergraduates studying mechanical chemical aerospace energy and environmental and industrial engineering **Computer Generated Physical Properties** Stan Bumble, 1999-06-01 Computer Generated Physical Properties offers the environmental scientist a basis to predict the

properties of molecules and reengineer them to remove those properties that are harmful to the environment This technology is currently used in other fields and is now becoming popular in the environmental engineering field because of its pollution prevention and waste reduction capabilities This book interdisciplinary in scope treats the physical properties of matter as generated by computers It covers a wide variety of topics pointing towards synthesizing new molecules to substitute for reactants intermediaries and products in industrial processes with better physical and environmental properties than the original The author achieves this with a spreadsheet program called SYNPROPS that operates on a PC computer with optimization features A radar type graph one for each property visually sorts the various groups in order of their contribution to the property creating the necessity for a computer to obtain answers for the structure of the optimum molecules for substitution or synthesis The author discusses applications to biologically active molecules without side effects including antineoplastic drugs Additionally he demonstrates model compounds and the applications of SYNPROPS optimization and substitution This book has everything you need to know about deriving properties and combinational chemistry from molecular structure *Hybrid Rocket Propulsion Design Handbook* Ashley Chandler Karp, Elizabeth Therese

Jens, 2023-10-07 *Hybrid Rocket Propulsion Design Handbook* provides system scaling laws design methodologies and a summary of available test data giving engineers all the tools they need to develop realistic hybrid system designs Important supporting theory from chemistry thermodynamics and rocket propulsion is addressed helping readers from a variety of backgrounds to understand this interdisciplinary subject This book also suggests guidelines for standardized reporting of test data in response to difficulties researchers have in working with results from different research institutes Covers general theory recent advances and current fragmented experimental results of hybrid rocket engines Outlines testing standards for hybrid researchers Provides guidance on how to use a freely available online code from NASA 2023 Asia-Pacific
