Chemometrics In Food Chemistry Volume 28 Data Handling In Science And Technology:

Chemometrics in Food Chemistry, 2013-06-08 The issues related to food science and authentication are of particular importance for researchers consumers and regulatory entities The need to guarantee quality foodstuff where the word quality encompasses many different meanings including e g nutritional value safety of use absence of alteration and adulterations genuineness typicalness etc has led researchers to look for increasingly effective tools to investigate and deal with food chemistry problems As even the simplest food is a complex matrix the way to investigate its chemistry cannot be other than multivariate Therefore chemometrics is a necessary and powerful tool for the field of food analysis and control For food science in general and food analysis and control in particular there are several problems for which chemometrics are of utmost importance Traceability i e the possibility of verifying the animal botanical geographical and or productive origin of a foodstuff is for instance one area where the use of chemometric techniques is not only recommended but essential indeed at present no specific chemical and or physico chemical markers have been identified that can be univocally linked to the origin of a foodstuff and the only way of obtaining reliable traceability is by means of multivariate classification applied to experimental fingerprinting results Another area where chemometrics is of particular importance is in building the bridge between consumer preferences sensory attributes and molecular profiling of food by identifying latent structures among the data tables bilinear modeling techniques such as PCA MCR PLS and its various evolutions can provide an interpretable and reliable connection among these domains Other problems include process control and monitoring the possibility of using RGB or hyperspectral imaging techniques to nondestructively check food quality calibration of multidimensional or hyphenated instruments etc

Food Authentication Contantinos A. Georgiou, Georgios P. Danezis, 2017-05-08 The determination of food authenticity is a vital component of quality control Its importance has been highlighted in recent years by high profile cases in the global supply chain such as the European horsemeat scandal and the Chinese melamine scandal which led to six fatalities and the hospitalisation of thousands of infants As well as being a safety concern authenticity is also a quality criterion for food and food ingredients Consumers and retailers demand that the products they purchase and sell are what they purport to be This book covers the most advanced techniques used for the authentication of a vast number of products around the world The reader will be informed about the latest pertinent analytical techniques Chapters focus on the novel techniques markers that have emerged in recent years An introductory section presents the concepts of food authentication while the second section examines in detail the analytical techniques for the detection of fraud relating to geographical botanical species and processing origin and production methods of food materials and ingredients Finally the third section looks at consumer attitudes towards food authenticity the application of bioinformatics to this field and the Editor s conclusions and future outlook Beyond being a reference to researchers working in food authentication it will serve as an essential source to analytical scientists interested in the field and food scientists to appreciate analytical approaches This

book will be a companion to under and postgraduate students in their wander in food authentication and aims to be useful to researchers in universities and research institutions

Chemometrics in Food Chemistry Mario Li Vigni, Caterina Durante, Marina Cocchi, 2013-06-08 In the food research and production field system complexity is increasing and several new challenges are emerging every day This implies an urgent necessity to extract information and obtain models capable of inferring the underlying relationships that link all the variability sources which characterize food or its production process e g compositional profile processing conditions to very general end properties of foodstuff such as the healthiness the consumer perception the link to a territory and the effect of the production chain itself on food This makes a deductive theory driven research approach inefficient as it is often difficult to formulate hypotheses Explorative multivariate data analysis methods together with the most recent analytical instrumentation offer the possibility to come back to an inductive data driven attitude with a minimum of a priori hypotheses instead helping in formulating new ones from the direct observation of data The aim of this chapter is to offer the reader an overview of the most significant tools that can be used in a preliminary exploratory phase ranging from the most classical descriptive statistics methods to multivariate analysis methods with particular attention to projection methods For all techniques examples are given so that the main advantage of these techniques which is a direct graphical representation of data and their characteristics can be immediately experienced by the reader

Opuntia spp.: Chemistry, Bioactivity and Industrial Applications Mohamed Fawzy Ramadan, Tamer E. Moussa Ayoub, Sascha Rohn, 2021-09-27 The Opuntia fruits commonly known as cactus pears or prickly pears have been suggested by the Food and Agriculture Organization to be a promising and strategic crop in regions suffering from lack of water In Mexico India South Africa and the Mediterranean the Opuntia fruits have become popular due to their nutritive value and health promoting benefits including antioxidant antiulcerogenic and antiatherogenic traits and protective effects against LDL oxidation Additionally readily absorbable sugars high vitamin C and mineral content and a pleasant flavour make Opuntia tailor made for novel foods Due to their ecological advantages high functional value and health related traits Opuntia fruits can be highly exploited in different food processing applications For instance Opuntia cactus fruits are used for the preparation of juices and marmalades Opuntia cactus plants are used to feed animals in African and Latin American countries Peruvian farmers cultivate Opuntia cactus for growing the cochineal *Dactylopius coccus* insect and producing the natural dye carmine and the commercial production of food and non food products from Opuntia has been established in Mexico USA and several Mediterranean countries Opuntia spp Chemistry Bioactivity and Industrial Applications creates a multidisciplinary forum of discussion on Opuntia cactus with special emphasis on its horticulture post harvest marketability chemistry functionality health promoting properties technology and processing The text includes detailed discussion of the impact of traditional and innovative processing on the recovery of high added value compounds from Opuntia spp by products Later chapters explore the potential applications of Opuntia spp in food cosmetics and pharmaceutical products

Non-invasive

and Non-destructive Methods for Food Integrity Ana María Jiménez-Carvelo, Alejandra Arroyo-Cerezo, Luis Cuadros-Rodríguez, 2024-12-16 There is an increasing need for the food industry to provide information to ensure quality requirements and prevent the food fraud applying in situ and on line technologies for full process control along the food chain In today s information age consumers want to be able to have as much information as possible about products quickly and efficiently Therefore the rapid detection of indicators that determine food quality and safety risks helps to ensure an effective and comprehensive food sovereignty system For this purpose the most powerful and commonly used analytical techniques are liquid or gas chromatography both coupled to different detection systems The use of these analytical techniques involves long analysis times and prior procedures of fitness for measuring such as sample pre treatment in which the use of reagents and chemical solvents that may be hazardous or harmful to the environment is common These facts highlight the need for the development of new analytical methods that offer the possibility of rapid non invasive on site environmentally friendly analyses that can be carried out along the entire production chain In addition recent technological developments and advances in data mining and machine learning offer the opportunity to introduce changes that could transform the role of food integrity Non invasive and Non destructive Methods for Food Integrity is dedicated to describing the fundamentals and applications of existing analytical technologies and the current state of these techniques at industrial level The text utilizes reported studies and applications differentiating by particular food and beverage groups in order to provide a comprehensive and detailed overview of the current state of the art of non invasive non destructive analytical techniques for food quality and integrity For each technique covered an introduction is included and the chemical information obtained and why this technology is useful for food analysis Information on the instrumentation available for the application of each technique in food is also provided as well as information on data processing with reference to the treatment of the signal obtained and the use of chemometrics Applications published in scientific literature are detailed for different categories of similar foods based on the techniques that are already used for the routine control of food integrity This book provides guidance for potential users in the food industries and quality control laboratories for choosing which technology to implement based on the type of product and the results to be obtained
