Deconstructing the Computer National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, Committee on Measuring and Sustaining the New Economy, Committee on Deconstructing the Computer, 2005-10-28 Starting in the mid 1990s the United States economy experienced an unprecedented upsurge in economic productivity Rapid technological change in communications computing and information management continue to promise further gains in productivity a phenomenon often referred to as the New Economy To better understand this phenomenon the National Academies Board on Science Technology and Economic Policy STEP has convened a series of workshops and commissioned papers on Measuring and Sustaining the New Economy This major workshop entitled Deconstructing the Computer brought together leading industrialists and academic researchers to explore the contribution of the different components of computers to improved price performance and quality of information systems The objective was to help understand the sources of the remarkable growth of American productivity in the 1990s the relative contributions of computers and their underlying components and the evolution and future contributions of the technologies supporting this positive economic performance

Hidden Costs of Energy National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Health, Environmental, and Other External Costs and Benefits of Energy Production and Consumption, 2010-05-26 Despite the many benefits of energy most of which are reflected in energy market prices the production distribution and use of energy causes negative effects Many of these negative effects are not reflected in energy market prices When market failures like this occur there may be a case for government interventions in the form of regulations taxes fees tradable permits or other instruments that will motivate recognition of these external or hidden costs The Hidden Costs of Energy defines and evaluates key external costs and benefits that are associated with the production distribution and use of energy but are not reflected in market prices The damage estimates presented are substantial and reflect damages from air pollution associated with electricity generation motor vehicle transportation and heat generation The book also considers other effects not quantified in dollar amounts such as damages from climate change effects of some air pollutants such as mercury and risks to national security While not a comprehensive guide to policy this analysis indicates that major initiatives to further reduce other emissions improve energy efficiency or shift to a cleaner electricity generating mix could substantially reduce the damages of external effects A first step in minimizing the adverse consequences of new energy technologies is to better understand these external effects and damages The Hidden Costs of Energy will therefore be a vital informational tool for government policy makers scientists and economists in even the earliest stages of research and development on energy technologies

The Battle Over Patents Stephen H. Haber, Naomi R. Lamoreaux, 2021 An examination of how the patent system works imperfections and all to incentivize innovation Do patents facilitate or frustrate innovation Lawyers economists and politicians who have staked out strong positions in this debate often attempt to validate their claims by invoking the historical record but they frequently get the history wrong The Battle over Patents gets it right Bringing together thoroughly researched essays from prominent historians and social scientists this volume traces the long and

contentious history of patents and examines how they have worked in practice Editors Stephen H Haber and Naomi R Lamoreaux show that patent systems are the result of contending interests at different points in production chains battling over economic surplus The larger the potential surplus the more extreme are the efforts of contending parties now and in the past to search out generate and exploit any and all sources of friction Patent systems as human creations are therefore necessarily ridden with imperfections This volume explores these shortcomings and explains why despite all the debate historically US style patent systems still dominate all other methods of encouraging inventive activity **The New Palgrave Dictionary of Economics** ,2016-05-18 The award winning The New Palgrave Dictionary of Economics 2nd edition is now available as a dynamic online resource Consisting of over 1 900 articles written by leading figures in the field including Nobel prize winners this is the definitive scholarly reference work for a new generation of economists Regularly updated This product is a subscription based product *Software, Growth, and the Future of the U.S Economy* National Research Council,Policy and Global Affairs,Board on Science, Technology, and Economic Policy,Committee on Measuring and Sustaining the New Economy,Committee on Software, Growth, and the Future of the U.S Economy,2006-04-06 Starting in the mid 1990s the United States economy experienced an unprecedented upsurge in economic productivity Rapid technological change in communications computing and information management continue to promise further gains in productivity a phenomenon often referred to as the New Economy To better understand this phenomenon the National Academies Board on Science Technology and Economic Policy STEP has convened a series of workshops and commissioned papers on Measuring and Sustaining the New Economy This major workshop entitled Software Growth and the Future of the U S Economy convened academic experts and industry representatives from leading companies such as Google and General Motors to participate in a high level discussion of the role of software and its importance to U S productivity growth how software is made and why it is unique the measurement of software in national and business accounts the implications of the movement of the U S software industry offshore and related policy issues **Deconstructing Ethnography** Graham Button,Andy Crabtree,Mark Rouncefield,Peter Tolmie,2015-10-15 This book aims to deconstruct ethnography to alert systems designers and other stakeholders to the issues presented by new approaches that move beyond the studies of work and work practice within the social sciences in particular anthropology and sociology The theoretical and methodological apparatus of the social sciences distort the social and cultural world as lived in and understood by ordinary members whose common sense understandings shape the actual milieu into which systems are placed and used In Deconstructing Ethnography the authors show how new calls are returning systems design to old and problematic ways of understanding the social They argue that systems design can be appropriately grounded in the social through the ordinary methods that members use to order their actions and interactions This work is written for post graduate students and researchers alike as well as design practitioners who have an interest in bringing the social to bear on design in a systematic rather than a

piecemeal way This is not a how to book but instead elaborates the foundations upon which the social can be systematically built into the design of ubiquitous and interactive systems The Telecommunications Challenge National Research Council,Policy and Global Affairs,Board on Science, Technology, and Economic Policy,Committee on Measuring and Sustaining the New Economy,Committee on The Telecommunications Challenge: Changing Technologies and Evolving Policies,2006-08-14 Starting in the mid 1990s the United States economy experienced an unprecedented upsurge in economic productivity Rapid technological change in communications computing and information management continue to promise further gains in productivity a phenomenon often referred to as the New Economy To better understand the sources of these gains and the policy measures needed to sustain these positive trends the National Academies Board on Science Technology and Economic Policy STEP convened a series of workshops and commissioned papers on Measuring and Sustaining the New Economy This workshop entitled The Telecommunications Challenge Changing Technologies and Evolving Policies brought together leading industry representatives and government officials to discuss issues generated by the rapid technological change occurring in the telecommunications industry and the regulatory and policy challenges this creates The workshop presented a variety of perspectives relating to developments in the telecommunications industry such as the potential of and impediments to broadband technology **SBIR/STTR at the National Institutes of Health** National Academies of Sciences, Engineering, and Medicine,Policy and Global Affairs,Board on Science, Technology, and Economic Policy,Committee on Capitalizing on Science, Technology, and Innovation: An Assessment of the Small Business Innovation Research Program--Phase II,2016-01-28 The Small Business Innovation Research SBIR and Small Business Technology Transfer STTR programs provide federal research and development funding to small businesses In 2008 the National Research Council completed a comprehensive assessment of the SBIR and STTR programs The first round study found that the programs were sound in concept and effective in practice Building on the outcomes from the Phase I study this second phase examines both topics of general policy interest that emerged during the first phase and topics of specific interest to individual agencies and provides a second snapshot to measure the program s progress against its legislative goals
