Diabetes Chapter 10 Resveratrol And Oxidative Stress In Diabetes Mellitus:

Diabetes Pál Brasnyó, Balázs Sümegi, Gábor Winkler, István Wittmann, 2013-10-29 Oxidative stress plays a key role in the pathogenesis of diabetes mellitus contributing not only to the development but also to the progression of diabetes and its related complications Both immunosuppressive and antioxidant effects of resveratrol in attenuating the increased oxidative stress due to responses of cells to leukocyte activation have been implicated in the prevention of type 1 diabetes mellitus Resveratrol affords advantageous effects by decreasing the oxidative injury and the recruitment of the nutritive precapillary arterioles in the context of disease states associated with insulin resistance such as metabolic syndrome pre diabetes and type 2 diabetes mellitus The antioxidant properties of resveratrol could result from its direct effects by acting as a free radical scavenger as well as its ability to indirectly activate antioxidant enzymes and other mechanisms These indirect effects could be conferred either via increased expression activation translocation of sirtuin 1 nuclear factor erythroid 2 related factor 2 superoxide dismutase catalase heme oxygenase 1 and glyoxalase or the suppression of inducible nitric oxide synthase and p47phox translocation expression with the resultant inhibition of nicotinamide adenine dinucleotide phosphate oxidase In addition to reducing oxidative stress resveratrol could also improve the carbohydrate metabolism by promoting similar beneficial metabolic processes to those found in caloric restriction via the activation of sirtuin 1 as well as by increasing the level of glucagon like peptide 1 by exerting an estrogen like effect or by stimulating the peroxisome proliferator activated receptor activity In our preliminary human study we examined the effects of resveratrol in type 2 diabetic patients In agreement with animal studies we found that resveratrol treatment markedly decreased the insulin resistance and blood glucose levels whereas we could not detect increases in insulin secretion We also found that the onset of the postprandial glucose peak was manifested after a longer lag time in the postprandial period with resveratrol treatment while there were no changes in amylin glucagon like peptide 1 and gastric inhibitory polypeptide levels hormones that prolong gastric emptying Additionally we found decreased urinary excretion rates of ortho tyrosine with resveratrol treatment indicating a lowered degree of the hydroxyl free radical production in these patients These findings support the notion that resveratrol decreases oxidative stress through its broad direct and indirect antioxidant effects and this could be a promising approach for the prevention and treatment of diabetes mellitus Further studies are undoubtedly warranted to better comprehend the effects of resveratrol in humans since there is very limited data from human observations

Diabetes Victor R Preedy, 2020-04-24 Diabetes Oxidative Stress and Dietary Antioxidants Second Edition builds on the success of the first edition covering updated research on the science of oxidative stress in diabetes and the potentially therapeutic usage of natural antioxidants in the diet and food matrix The processes within the science of oxidative stress are not described in isolation but rather in concert with other processes such as apoptosis cell signaling and receptor mediated responses This approach recognizes that diseases are often multifactorial and oxidative stress is a single component of this

Since the publication of the first edition the science of oxidative stress and free radical biology continues to rapidly advance with thousands of the research articles on the topic New sections in this update cover the role of dietary advanced glycation end products AGEs in causing OS in diabetes oxidative stress and diabetes induced bone metabolism and oxidative stress and diabetic foot ulcer Saves clinicians and researchers time in quickly accessing the very latest details on a broad range of diabetes and oxidation issues Combines the science of oxidative stress and the putative therapeutic usage of natural antioxidants in the diet its food matrix or plant Includes preclinical clinical and population studies to help endocrinologists diabetologists nutritionists dieticians and clinicians map out key areas for research and further clinical recommendations
