Sathyavathi Sundararaju, Arun Prasath Lakshmanan, Pushpanathan Muthuirulan, Jeyaprakash Rajendhran, 2024-08-20 Clinical
metagenomics is an emerging method in the diagnosis of infectious diseases that uses next generation sequencing NGS
technology to identify the etiologic agents to allow for more effective and targeted treatment of infectious diseases
Conventional diagnostic methods are mainly based on basic morphologic phenotypic and genotypic analyses which can be
insensitive and or time consuming Metagenomic NGS mNGS can be performed with only a small amount of nucleic acid from
the specimen and not only can the pathogen be identified and characterized but also its antimicrobial susceptibility can be
inferred Although tremendous advancements were made in the speed throughput and cost of NGS in recent years the
application of clinical metagenomics in routine diagnosis of infectious diseases is not yet practical because of its much higher
cost compared to conventional microbiological tests complex laboratory workflows and computational challenges
