Evolutionary Perspectives on Infancy Sybil L. Hart, David F. Bjorklund, 2022-01-01 This unique volume is one of the first of its kind to examine infancy through an evolutionary lens identifying infancy as a discrete stage during which particular types of adaptations arose as a consequence of certain environmental pressures Infancy is a crucial time period in psychological development and evolutionary psychologists are increasingly recognizing that natural selection has operated on all stages of development not just adulthood The volume addresses this crucial change in perspective by highlighting research across diverse disciplines including developmental psychology evolutionary developmental psychology anthropology sociology nutrition and primatology Chapters are grouped into four sections Theoretical Underpinnings Brain and Cognitive Development Social Emotional Development Life and Death Evolutionary Perspectives on Infancy sheds new light on our understanding of the human brain and the environments responsible for shaping the brain during early stages of development This book will be of interest to evolutionary psychologists and developmental psychologists biologists and anthropologists as well as scholars more broadly interested in infancy

Cerebral Lateralization and Cognition: Evolutionary and Developmental Investigations of Behavioral Biases, 2018-08-07 Cerebral Lateralization and Cognition Evolutionary and Developmental Investigations of Motor Biases Volume 238 the latest release in the Progress in Brain Research series discusses interdisciplinary research on the influence of cerebral lateralization on cognition within an evolutionary framework Chapters of note in this release include Evolutionary Perspectives Visual Motor Biases and Cognition Manual laterality and cognition through evolution An archeological perspective Laterality in insects Motor asymmetries in fish amphibians and reptiles Visual biases and social cognition in animals Mother and offspring lateralized social interaction across animal species Manual bias personality and cognition in common marmosets and other primates and more Presents investigations of cognitive development in an evolutionary framework Provides a better understanding of the causal relationship between motor function and brain organization Brings clinicians and neuroscientists together to consider the relevance of motor biases as behavioral biomarkers of cognitive

disorders Includes future possibilities for early detection and motor intervention therapies Brain Development of Medaka Fish Yuji Ishikawa, Naoyuki Yamamoto, Hanako Hagio, 2022-10-06 This book describes the developmental process of the brain of the medaka fish It aims to understand the brain structure of vertebrates including humans by taking the brain of the medaka fish as an example and showing its actual developmental process From developmental and evolutionary viewpoints the understanding of the brain proceeds from simple to complex structures Fish retain the basic form of vertebrates and their brain morphology is relatively simple Therefore the fish brain is useful in understanding the brain structure This book is unique for describing the entire process of the brain development in a specific fish In addition the book introduces the readers to a new concept of Hourglass of Brain Morphogenesis concerning the general rule of brain morphogenesis in vertebrates The authors propose that the brain morphology is highly conserved at the middle developmental stage but diverges more extensively at earlier and later stages The new concept challenges the accepted theory that has been widely shared for about 200 years since K von Baer 1828 1837 and K von Kupffer 1906 who proposed that three primary brain vesicles at earlier developmental stages develop into five secondary brain vesicles at later developmental stages in all vertebrates The book provides a basic understanding of the vertebrate brain and is useful for all readers who wish to understand the complex structure of the brain *From Neuron to Cognition via Computational Neuroscience* Michael A. Arbib, James J. Bonaiuto, 2016-11-04 A comprehensive integrated and accessible textbook presenting core neuroscientific topics from a computational perspective tracing a path from cells and circuits to behavior and cognition This textbook presents a wide range of subjects in neuroscience from a computational perspective It offers a comprehensive integrated introduction to core topics using computational tools to trace a path from neurons and circuits to behavior and cognition Moreover the chapters show how computational neuroscience methods for modeling the causal interactions underlying neural systems complements empirical research in advancing the understanding of brain and behavior The chapters all by leaders in the field and carefully integrated by the editors cover such subjects as action and motor control neuroplasticity neuromodulation and reinforcement learning vision and language the core of human cognition The book can be used for advanced undergraduate or graduate level courses It presents all necessary background in neuroscience beyond basic facts about neurons and synapses and general ideas about the structure and function of the human brain Students should be familiar with differential equations and probability theory and be able to pick up the basics of programming in MATLAB and or Python Slides exercises and other ancillary materials are freely available online and many of the models described in the chapters are documented in the brain operation database BODB which is also described in a book chapter Contributors Michael A Arbib Joseph Ayers James Bednar Andrej Bicanski James J Bonaiuto Nicolas Brunel Jean Marie Cabelguen Carmen Canavier Angelo Cangelosi Richard P Cooper Carlos R Cortes Nathaniel Daw Paul Dean Peter Ford Dominey Pierre Enel Jean Marc Fellous Stefano Fusi Wulfram Gerstner Frank Grasso Jacqueline A Griego Ziad M Hafeed Michael E Hasselmo Auke

Evolution of the Brain, Cognition, and Emotion in Vertebrates Shigeru Watanabe, Michel A Hofman, Toru Shimizu, 2017-09-05 This book presents a new view on the evolution of the brain cognition and emotion Around a half century ago Professor Harry Jerison published a seminal book entitled Evolution of the Brain and Intelligence Since then there has been a series of dramatic methodological and conceptual changes which have led to many new insights into the understanding of brain evolution and cognition This book is particularly focused on three significant aspects of such changes First taking advantage of a new integrated approach called evolutionary developmental biology or Evo Devo researchers have started to look into vertebrate brain evolution from the developmental perspective Second comparative neuroanatomists have accumulated a large amount of information about the brains of diverse animal groups to refute the old fashioned idea that vertebrate brains evolved linearly from non mammals to mammals Third comparative behavioral studies have demonstrated that sophisticated cognition and emotion are not unique to some primates but are also found in many non primate and even non mammalian species This work will appeal to a wide readership in such fields as neuroscience cognitive science and behavioral science
