Embedded and Real-Time Operating Systems K.C. Wang, 2017-03-21 This book covers the basic concepts and principles of operating systems showing how to apply them to the design and implementation of complete operating systems for embedded and real time systems It includes all the foundational and background information on ARM architecture ARM instructions and programming toolchain for developing programs virtual machines for software implementation and testing program execution image function call conventions run time stack usage and link C programs with assembly code It describes the design and implementation of a complete OS for embedded systems in incremental steps explaining the design principles and implementation techniques For Symmetric Multiprocessing SMP embedded systems the author examines the ARM MPcore processors which include the SCU and GIC for interrupts routing and interprocessor communication and synchronization by Software Generated Interrupts SGIs Throughout the book complete working sample systems demonstrate the design principles and implementation techniques The content is suitable for advanced level and graduate students working in software engineering programming and systems theory *Computer Organization, Design, and Architecture* Sajjan G. Shiva, 2025-05-30 This unique and classroom proven text provides a hands on introduction to the design of computer systems It depicts step by step the design and programming of a simple but complete hypothetical computer followed by detailed architectural features of existing computer systems as enhancements to the structure of the simple computer This treatment integrates the four categories of digital systems architecture logic design computer organization computer hardware and computer system architecture This edition incorporates updates to reflect contemporary organizations and devices including graphics processing units GPUs quantum computing and the latest supercomputer systems It also includes a description of the two popular Instruction Set Architectures ARM and RISC V The book is suitable for a one or two semester undergraduate or beginning graduate course in computer science and computer engineering its previous editions have been adopted by 120 universities around the world The book covers the topics suggested by the recent IEEE ACM curriculum for computer architecture and organization Network Security and Data Privacy in 6G Communication Rajendra Kumar, Vishal Jain, Danish Ather, Vinay Kukreja, Manoj Singhal, 2025-02-13 This book proposes robust solutions for securing a network against intrusions for data privacy and safety It includes theoretical models commercialization of validated models and case studies Explains the integration of technologies such as artificial intelligence the Internet of Things and blockchain for network security in a 6G communication system Highlights the challenges such as spectrum allocation and management network architecture and heterogeneity energy efficiency and sustainability antenna and radio frequency Discuss theories like quantum safe cryptography zero trust networking and blockchain based trust management Covers emerging technologies including homomorphic encryption secure multi party computation post quantum cryptography and distributed ledger technology for security and privacy in 6G communication systems Presents light and

deep secure algorithms to detect fake incidents in wireless communication The text is primarily written for senior undergraduates graduate students and academic researchers in fields including electrical engineering electronics and communications engineering and computer science

FPGAs Juan Jose Rodriguez Andina,Eduardo de la Torre Arnanz,Maria Dolores Valdes,2017-07-28 Field Programmable Gate Arrays FPGAs are currently recognized as the most suitable platform for the implementation of complex digital systems targeting an increasing number of industrial electronics applications They cover a huge variety of application areas such as aerospace food industry art industrial automation automotive biomedicine process control military logistics power electronics chemistry sensor networks robotics ultrasound security and artificial vision This book first presents the basic architectures of the devices to familiarize the reader with the fundamentals of FPGAs before identifying and discussing new resources that extend the ability of the devices to solve problems in new application domains Design methodologies are discussed and application examples are included for some of these domains e g mechatronics robotics and power systems

Computer Security - ESORICS 2016 Ioannis Askoxylakis,Sotiris Ioannidis,Sokratis Katsikas,Catherine Meadows,2016-09-14 The two volume set LNCS 9878 and 9879 constitutes the refereed proceedings of the 21st European Symposium on Research in Computer Security ESORICS 2016 held in Heraklion Greece in September 2016 The 60 revised full papers presented were carefully reviewed and selected from 285 submissions The papers cover a wide range of topics in security and privacy including data protection systems security network security access control authentication and security in such emerging areas as cloud computing cyber physical systems and the Internet of Things

Networked Systems Parosh Aziz Abdulla,Carole Delporte-Gallet,2016-09-14 This book constitutes the refereed post proceedings of the 4th International Conference on Networked Systems NETYS 2016 held in Marrakech Morocco in May 2016 The 22 full papers and 11 short papers presented together with 19 poster abstracts were carefully reviewed and selected from 121 submissions They report on best practices and novel algorithms results and techniques on networked systems and cover topics such as multi core architectures concurrent and distributed algorithms parallel concurrent distributed programming distributed databases cloud systems networks security and formal verification

Applied Reconfigurable Computing Vanderlei Bonato,Christos Bouganis,Marek Gorgon,2016-03-15 This book constitutes the refereed proceedings of the 12th International Symposium on Applied Reconfigurable Computing ARC 2016 held in Rio de Janeiro Brazil in March 2016 The 20 full papers presented in this volume were carefully reviewed and selected from 47 submissions They are organized in topical headings named video and image processing fault tolerant systems tools and architectures signal processing and multicore systems In addition the book contains 3 invited papers and 8 poster papers on funded RD running and completed projects

Modeling and Optimization of Parallel and Distributed Embedded Systems Arslan Munir,Ann Gordon-Ross,Sanjay Ranka,2015-12-28 This book introduces the state of the art in research in parallel and distributed embedded systems which have been enabled by developments in silicon technology micro electro mechanical

systems MEMS wireless communications computer networking and digital electronics These systems have diverse applications in domains including military and defense medical automotive and unmanned autonomous vehicles The emphasis of the book is on the modeling and optimization of emerging parallel and distributed embedded systems in relation to the three key design metrics of performance power and dependability Key features Includes an embedded wireless sensor networks case study to help illustrate the modeling and optimization of distributed embedded systems Provides an analysis of multi core many core based embedded systems to explain the modeling and optimization of parallel embedded systems Features an application metrics estimation model Markov modeling for fault tolerance and analysis and queueing theoretic modeling for performance evaluation Discusses optimization approaches for distributed wireless sensor networks high performance and energy efficient techniques at the architecture middleware and software levels for parallel multicore based embedded systems and dynamic optimization methodologies Highlights research challenges and future research directions The book is primarily aimed at researchers in embedded systems however it will also serve as an invaluable reference to senior undergraduate and graduate students with an interest in embedded systems research

Information and Communication Technology for Intelligent Systems (ICTIS 2017) - Volume 1 Suresh Chandra Satapathy, Amit Joshi, 2017-08-07 This volume includes 74 papers presented at ICTIS 2017 Second International Conference on Information and Communication Technology for Intelligent Systems The conference was held on 25th and 26th March 2017 in Ahmedabad India and organized jointly by the Associated Chambers of Commerce and Industry of India ASSOCHAM Gujarat Chapter the G R Foundation the Association of Computer Machinery Ahmedabad Chapter and supported by the Computer Society of India Division IV Communication and Division V Education and Research The papers featured mainly focus on information and communications technology ICT for computation algorithms and data analytics The fundamentals of various data analytics and algorithms discussed are useful to researchers in the field

Smart Camera Design Marilyn Wolf, 2017-11-28 This book describes the algorithms and computer architectures used to create and analyze photographs in modern digital cameras It also puts the capabilities of digital cameras into context for applications in art entertainment and video analysis The author discusses the entire range of topics relevant to digital camera design including image processing computer vision image sensors system on chip and optics while clearly describing the interactions between design decisions at these different levels of abstraction Readers will benefit from this comprehensive view of digital camera design describing the range of algorithms used to compose enhance and analyze images as well as the characteristics of optics image sensors and computing platforms that determine the physical limits of image capture and computing The content is designed to be used by algorithm designers and does not require an extensive background in optics or electronics
