Handbook of Research on Network-Enabled IoT Applications for Smart City Services Reddy, K. Hemant Kumar,Roy, Diptendu Sinha,Mishra, Tapas Kumar,Hussain, Mir Wajahat,2023-09-26 The rapid growth of IoT and its applications in smart cities pose significant challenges for academic scholars The increasing number of interconnected devices and the massive

amounts of data they generate strain traditional networks leading to inefficiencies and security vulnerabilities. Additionally, the centralized control plane in Software Defined Networks (SDN) presents a single point of failure hindering network performance while IoT devices themselves are susceptible to attacks compromising user data and privacy. To address these pressing issues, Network Enabled IoT Applications for Smart City Services offers a compelling solution. Edited by Dr K Hemant Kumar Reddy, Dr Diptendu SinhaRoy and Tapas Mishra, this book advocates leveraging SDN to handle high frequency data streams effectively. It also proposes the integration of blockchain technology to enhance security and reliability in IoT applications, offering a roadmap for scholars to improve network efficiency, security, and reliability in IoT and smart city domains. With their extensive expertise, the authors provide academic scholars with a comprehensive and innovative resource that inspires further research and development in this evolving field, enabling them to make significant contributions to the advancement of IoT and smart city technologies.

Instrument Engineers' Handbook, Volume 3

Bela G. Liptak, Halit Eren, 2018-10-08. Instrument Engineers Handbook Volume 3: Process Software and Digital Networks. Fourth Edition is the latest addition to an enduring collection that industrial automation (AT) professionals often refer to as the bible. First published in 1970, the entire handbook is approximately 5,000 pages, designed as standalone volumes that cover the measurement, control, and software aspects of automation. This fourth edition of the third volume provides an in-depth state-of-the-art review of control software packages used in plant optimization, control, maintenance, and safety. Each updated volume of this renowned reference requires about ten years to prepare, so revised installments have been issued every decade, taking into account the numerous developments that occur from one publication to the next. Assessing the rapid evolution of automation and optimization in control systems used in all types of industrial plants, this book details the wired, wireless communications, and software used. This includes the ever-increasing number of applications for intelligent instruments, enhanced networks, Internet use, virtual private networks, and integration of control systems with the main networks used by management, all of which operate in a linked global environment. Topics covered include advances in new displays which help operators to more quickly assess and respond to plant conditions; software and networks that help monitor control and optimize industrial processes to determine efficiency, energy consumption, and profitability of operations; strategies to counteract changes in market conditions and energy and raw material costs; techniques to fortify the safety of plant operations and the security of digital communications systems. This volume explores why the holistic approach to integrating process and enterprise networks is convenient and efficient despite associated problems involving cyber and local network security, energy conservation, and other issues. It shows how firewalls must separate the business IT and the operation automation technology or AT domains to guarantee the safe function of all industrial plants. This book illustrates how these concerns must be addressed using effective technical solutions and proper management policies and practices. Reinforcing the fact that all industrial control systems are in general critically

interdependent this handbook provides a wide range of software application examples from industries including automotive mining renewable energy steel dairy pharmaceutical mineral processing oil gas electric power utility and nuclear power
