Resilience in Ecology and Urban Design S.T.A.

Pickett,M.L. Cadenasso,Brian McGrath,2013-01-13 The contributors to this volume propose strategies of urgent and vital importance that aim to make today s urban environments more resilient Resilience the ability of complex systems to adapt to changing conditions is a key frontier in ecological research and is especially relevant in creative urban design as urban areas exemplify complex systems With something approaching half of the world s population now residing in coastal urban zones many of which are vulnerable both to floods originating inland and rising sea levels making urban areas more robust in the face of environmental threats must be a policy ambition of the highest priority The complexity of urban areas results from their spatial heterogeneity their intertwined material and energy fluxes and the integration of social and natural processes All of these features can be altered by intentional planning and design The complex integrated suite of urban structures and processes together affect the adaptive resilience of urban systems but also presupposes that planners can intervene in positive ways As examples accumulate of linkage between sustainability and building landscape design such as the Shanghai Chemical Industrial Park and Toronto s Lower Don River area this book unites the ideas data and insights of ecologists and related scientists with those of urban designers It aims to integrate a formerly atomized dialog to help both disciplines promote urban resilience

Climate Resilient Cities Neeraj Prasad, Federica

Ranghieri, Fatima Shah, Zoe Trohanis, Earl Kessler, Ravi Sinha, 2009-02-19 *Climate Resilient Cities A Primer on Reducing Vulnerabilities to Disasters* provides city administrators with exactly what they need to know about the complex and compelling challenges of climate change. The book helps local governments create training capacity building and capital investment programs for building sustainable resilient communities. A step by step self assessment challenges policymakers to think about the resources needed to combat natural disasters through an innovative hot spot risk and vulnerability identification tool. This primer is unique from other resources in its treatment of climate change using a dual track approach that integrates both mitigation lowering contributions to greenhouse gases and adaptation preparing for impacts of climate change with disaster risk management. The book is relevant both to cities that are just beginning to think about climate change as well as those that already have well established policies institutions and strategies in place. By providing a range of city level examples of sound practices around the world the book demonstrates that there are many practical actions that cities can take to build resilience to climate change and natural disasters.
