Conceptions Of Cosmos From Myths To The:

Conceptions of Cosmos Helge S. Kragh, 2006-12-07 This book is a historical account of how natural philosophers and scientists have endeavoured to understand the universe at large first in a mythical and later in a scientific context Starting with the creation stories of ancient Egypt and Mesopotamia the book covers all the major events in theoretical and observational cosmology from Aristotle's cosmos over the Copernican revolution to the discovery of the accelerating universe in the late 1990s It presents cosmology as a subject including scientific as well as non scientific dimensions and tells the story of how it developed into a true science of the heavens Contrary to most other books in the history of cosmology it offers an integrated account of the development with emphasis on the modern Einsteinian and post Einsteinian period Starting in the pre literary era it carries the story onwards to the early years of the 21st century

Conceptions of Cosmos Helge Kragh, 2007 Presenting a history of how the universe at large became the object of scientific understanding this title offers an integrated and comprehensive account of cosmology that covers all major events from Aristotle's Earth centred cosmos to the discovery of the accelerating universe

Science and Religion in Dialogue Raymond E. Grizzle, 2012-05-04 This book provides an overview of the history of interactions between science and religion with an emphasis on Christianity Raymond E Grizzle examines his own history of self reflection on science and religion focusing on what we have learned about the structure history and functioning of creation Both histories are interpreted as histories of discarded images largely consisting of the replacement of images of creation provided by religion with those provided by the natural sciences Grizzle assesses the major kinds of creationism that exist today and explores conflicts arising from young Earth creationism and intelligent design He also provides examples of productive dialogue regarding how science and religion might inform one another Two major themes that run throughout the book are the importance of underlying beliefs and the reliability of modern science in producing a truthful understanding of the cosmos and the creation process Science and Religion in Dialogue concludes with some suggested principles for constructive self reflection and thoughts on how today's conflict might be replaced with productive discourse involving both science and religion

Avant-Garde World Creation Abigail van Alst, 2025-10-30 This book explores the widespread fascination with world creation among early twentieth century artists and examines those trends within the European avant garde The book reflects on what the world looks and feels like before and after World War One and thus also concerns creativity and destruction alike in the context of modernity Over the course of three chapters the author focusses on works in which avant garde artists combine and experiment with various arts and media to create alternative narratives of the world's creation These works include three canonized total works of art Der Weltbaumeister The World's Master Builder 1920 an illustrated book imagined as an architectural play by the Expressionist architect Bruno Taut the Futurist opera Victory Over the Sun 1913 by Aleksei Kruchenykh Velimir Khlebnikov Kazimir Malevich and Mikhail Matiushin and the Cubist ballet La Cr ation du monde The Creation of the World 1923 by Blaise Cendrars Fernand L ger

Darius Milhaud and Jean Brlin Providing new readings of these classic works that dive deeply into the avant garde s inter artistic search for new modes of mediation as well as its dialogue with science politics and technology Abigael van Alst demonstrates how each of these artworks staged a cosmogony an alternative story of the universe s creation which simultaneously experimentally and critically recounted the story of modernity This new book is ideal for researchers and scholars in History of Art Modernism and Comparative Literature

Accelerating Human Evolution by Theosophical Initiation Yves Mühlematter,2022-12-19 The main subjects of analysis in the present book are the stages of initiation in the grand scheme of Theosophical evolution These initiatory steps are connected to an idea of evolutionary self development by means of a set of virtues that are relative to the individual s position on the path of evolution The central thesis is that these stages were translated from the Hindu tradition to the Theosophical tradition through multifaceted hybridization processes in which several Indian members of the Theosophical Society partook Starting with Annie Besant s early Theosophy the stages of initiation are traced through Blavatsky s work to Manilal Dvivedi and T Subba Row both Indian members of the Theosophical Society and then on to the San tana Dharma Text Books In 1898 the English Theosophist Annie Besant and the Indian Theosophist Bhagavan Das together founded the Central Hindu College Benares which became the nucleus around which the Benares Hindu University was instituted in 1915 In this context the San tana Dharma Text Books were published M hlematter shows that the stages of initiation were the blueprint for Annie Besant s pedagogy which she implemented in the Central Hindu College in Benares In doing so he succeeds in making intelligible how esoteric knowledge was transferred to public institutions and how a broader public could be reached as a result The dissertation has been awarded the ESSWE PhD Thesis prize 2022 by the European Society for the Study of Western Esotericism

About Time Adam Frank,2012-09-11 The Big Bang is dead and astrophysicist Adam Frank explains how our experience of time will change as a result

Conceiving God: The Cognitive Origin and Evolution of Religion David Lewis-Williams,2010-03-01 A controversial exploration of the origin of religion in the neurology of the human brain In this book the noted cognitive archaeologist David Lewis Williams confronts a question that troubles many people in the world today Is there a supernatural realm that intervenes in the material world of daily life and leads to the evolution of religions Professor Lewis Williams first describes how science developed within the cocoon of religion and then shows how the natural functioning of the human brain creates experiences that can lead to belief in a supernatural realm beings and interventions Once people have these experiences they formulate beliefs about them and thus creeds are born Forty thousand years ago people were leaving traces in the archaeological record of activities that we can label religious and Lewis Williams discusses in detail the evidence preserved in the Volp Caves in France He also shows that mental imagery produced by the functioning of the human brain can be detected in widely separated religious communities such as Hildegard of Bingen s in medieval Europe or the San hunters of southern Africa
