This paper serves to demonstrate the power of deep learning-based computer vision models for material image studies and suggests the possibility that most aspects of defect analysis may soon be practically automated, and many, if not all, handcrafted feature-based methods may be replaced by deep learning methods.

Figure 1. Selected bright field scanning transmission electron microscopy (STEM) image of an irradiated ferritic alloy showing four common morphologies of dislocation loops: (1) open ellipse loops (single ring edge), (2) open ellipse loops (double ring edges), (3) closed elliptical solid loops, (4) closed circular solid dots. Open single edge ellipse loops (1) are dislocation loops with a Burgers vector of $\frac{a_0}{2}(111)$. Open double edge ellipse loops (2) and closed elliptical solid loops (3) are dislocation loops with a Burgers vector of $a_0(100)$. Closed circular solid dots (4) are black dot defects with a Burgers vector of either $\frac{a_0}{2}(111)$ or $a_0(100)$. Image size: Primary image is 290×290 nm; inset scales arbitrary.

Proceedings of the Second Symposium on Defects in Silicon W. Murray Bullis, U. Gösele, Fumio Shimura, 1991 Surface and Defect Properties of Solids M W Roberts, John M Thomas, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 90 years The Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry

Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume Electronic Materials L.S. Miller,J.B. Mullin,2012-12-06 Electronic materials are a dominant factor in many areas of modern technology The need to understand them is paramount this book addresses that need The main aim of this volume is to provide a broad unified view of electronic materials including key aspects of their science and technology and also in many cases their commercial implications It was considered important that much of the contents of such an overview should be intelligible by a broad audience of graduates and industrial scientists and relevant to advanced undergraduate studies It should also be up to date and even looking forward to the future Although more extensive and written specifically as a text the resulting book has much in common with a short course of the same name given at Coventry Polytechnic The interpretation of the term electronic materials used in this volume is a very broad one in line with the initial aim The principal restriction is that with one or two minor exceptions relating to aspects of device processing for example the materials dealt with are all active materials Materials such as simple insulators or simple conductors playing only a passive role are not singled out for consideration Active materials might be defined as those involved in the processing of signals in a way that depends crucially on some specific property of those materials and the immediate question then concerns the types of signals that might be considered
