Deduction Philip Nicholas Johnson-Laird, Ruth M. J. Byrne, 1991 **Handbook of the Logic of Argument and Inference** R.H. Johnson, H.J. Ohlbach, Dov M. Gabbay, John Woods, 2002-09-11 The Handbook of the Logic of Argument and Inference is an authoritative reference work in a single volume designed for the attention of senior undergraduates graduate students and researchers in all the leading research areas concerned with the logic of practical argument and inference After an introductory chapter the role of standard logics is surveyed in two chapters These chapters can serve as a mini course for interested readers in deductive and inductive logic or as a refresher Then follow two chapters of criticism one the internal critique and the other the empirical critique The first deals with objections to standard logics as theories of argument and inference arising from the research programme in philosophical logic The second canvasses criticisms arising from work in cognitive and experimental psychology The next five chapters deal with developments in dialogue logic interrogative logic informal logic probability logic and artificial intelligence The last chapter surveys formal approaches to practical reasoning and anticipates possible future developments Taken as a whole the Handbook is a single volume indication of the present state of the logic of argument and inference at its conceptual and theoretical best Future editions will periodically incorporate significant new developments

Reading and the Mental Lexicon Marcus Taft, 2013-10-28 Over the last twenty years a major area of cognitive psychology has developed centred upon research into the issues of how visually presented words are processed so that they can be read and understood The focus has been on how words are stored in the mental lexicon and retrieved during the reading process If we possessed no mental lexicon we would be unable to read This book dedicates itself to a critical evaluation of the ideas that have emerged from this body of research The text outlines the major models of lexical processing that have been put forward in the literature and how they explain the basic empirical findings that have been reported It then goes on to consider the possible influence that sentential context has on lexical processing the impact of the pronunciation of a word on its visual processing and the role played by internal word structure i e syllables and morphemes in the recognition of a word A connectionist style model emerges during the course of the evaluation of these issues This book is suitable for advanced students and researchers and is intended to serve as a springboard for discussion and an inspiration for empirical research

Approaches to Legal Rationality Dov M. Gabbay, Patrice Canivez, Shahid Rahman, Alexandre Thiercelin, 2010-10-04 Legal theory political sciences sociology philosophy logic artificial intelligence there are many approaches to legal argumentation Each of them provides specific insights into highly complex phenomena Different disciplines but also different traditions in disciplines e g analytical and continental traditions in philosophy find here a rare occasion to meet The present book contains contributions both historical and thematic from leading researchers in several of the most important approaches to legal rationality One of the main issues is the relation between logic and law the way logic is actually used in law but also the way logic can make law explicit An

outstanding group of philosophers logicians and jurists try to meet this issue The book is more than a collection of papers However different their respective conceptual tools may be the authors share a common conception legal argumentation is a specific argumentation context

The Oxford Handbook of Causal Reasoning Michael Waldmann,2017 The Oxford Handbook of Causal Reasoning offers a state of the art review of one of our most central cognitive competencies which has for a long time been neglected in cognitive psychology This Handbook provides introductions of competing theories of causal reasoning and discusses its role in various cognitive functions and domains Grading Knowledge Steffen Staab,2003-06-26 This book develops concise and comprehensive concepts for extracting degree information from natural language texts First an overview of the ParseTalk information extraction system is given Then from the review of relevant linguistic literature the author derives two distinct categories of natural language degree expressions and proposes knowledge intensive algorithms to handle their analyses in the ParseTalk system Moreover for inferencing the author generalizes from well known constraint propagation mechanisms The concepts and methods developed are applied to text domains from medical diagnosis and information technology magazines The conclusion of the book gives an integration of all three levels of understanding resulting in more advanced and more efficient information extraction mechanisms

Ontolinguistics Andrea C. Schalley,Dietmar Zaefferer,2008-08-22 Current progress in linguistic theorizing is more and more informed by cross linguistic including cross modal investigation Comparison of languages relies crucially on the concepts that can be coded with similar effort in all languages These concepts are part of every language user s ontology the network of cross connected conceptualizations the mind uses in coping with the world Assuming that language comparability is rooted in the comparability of user ontologies the idea of the present volume is to further instigate progress in linguistics by looking behind the interface with the conceptual intentional system and asking a still underexplored question How are ontological structures reflected in intra and cross linguistic regularities This question defines the research program of ontology based linguistics or ontolinguistics Recent advances in the theory of language have been characterized by an emphasis on external explanatory adequacy and thus on relating language to other phenomena The research program introduced in this volume adds a decisively distinct and fresh aspect to this emerging new contextualization of the field by bringing together insights from different areas mainly linguistics but also neuroscience philosophy and artificial intelligence In providing these disciplines with a new common task the exploration of the impact of ontological structures on linguistic regularities the ontolinguistic approach promises to develop into a vital branch of cognitive science Documenting the beginnings the book aims to instigate future interdisciplinary research in this area It will be of interest to researchers in linguistics artificial intelligence philosophy and cognitive science in general

Contemplating Climate Change Stephen M. Dark,2018-07-11 Global climate change policy has failed us all but what is the reasoning that underlies this failure Why are some people more disposed to reflect on confounding issues like climate change recognise the danger seek a solution and act accordingly more

than others This book is concerned with how we think and act in response to climate change In particular faced with deep uncertainty and the multifaceted complexities that characterise the climate change conundrum how the various actors and institutions involved in the policymaking process make decisions that both aid and impede in the design and implementation of climate change policy This book focuses on how these actors and institutions frame and use the knowledge available under conditions of competing ideologies and interests and synthesise it to form often disparate mental models or worldviews that inspire them to become firm advocates of meaningful climate change action or indeed sceptics that continue to downplay the threat and hence the need for urgency By exploring how we think about climate change and the disparate mental models we hold as a result this book explores why humankind has thus far failed in its endeavours to solve the climate change problem This book will be of great interest to students and scholars of climate change environmental policy and environmental psychology

Agenda Relevance: A Study in Formal Pragmatics, 2003-05-29 Agenda Relevance is the first volume in the authors omnibus investigation of the logic of practical reasoning under the collective title A Practical Logic of Cognitive Systems In this highly original approach practical reasoning is identified as reasoning performed with comparatively few cognitive assets including resources such as information time and computational capacity Unlike what is proposed in optimization models of human cognition a practical reasoner lacks perfect information boundless time and unconstrained access to computational complexity The practical reasoner is therefore obliged to be a cognitive economizer and to achieve his cognitive ends with considerable efficiency Accordingly the practical reasoner avails himself of various scarce resource compensation strategies He also possesses neurocognitive traits that abet him in his reasoning tasks Prominent among these is the practical agent's striking though not perfect adeptness at evading irrelevant information and staying on task On the approach taken here irrelevancies are impediments to the attainment of cognitive ends Thus in its most basic sense relevant information is cognitively helpful information Information can then be said to be relevant for a practical reasoner to the extent that it advances or closes some cognitive agenda of his The book explores this idea with a conceptual detail and nuance not seen in the standard semantic probabilistic and pragmatic approaches to relevance but

wherever possible the authors seek to integrate alternative conceptions rather than reject them outright A further attraction of the agenda relevance approach is the extent to which its principal conceptual findings lend themselves to technically sophisticated re expression in formal models that marshal the resources of time and action logics and labelled deductive systems Agenda Relevance is necessary reading for researchers in logic belief dynamics computer science AI psychology and neuroscience linguistics argumentation theory and legal reasoning and forensic science and will repay study by graduate students and senior undergraduates in these same fields Key features relevance action and agendas practical reasoning belief dynamics non classical logics labelled deductive systems
