Decision-Making Francesco Nudi, Orazio Schillaci, Giuseppe Biondi-Zoccai, Ami E. Iskandrian, 2022-08-18 Performing any
diagnostic test in medicine is always a matter of trying to get the condition of the patient diagnosed properly with the least
effort exposure discomfort and at the same time with the lowest possible error probability Pre test probability is helpful but
often imprecise effectively overestimating the patient's risk profile In a broader prevention objective the phases of a disease
its onset progression and complications must be taken into account The negative predictive value which is so important has
in turn its main limitation in identifying the healthy patient that is the one who does not belong to any cluster of patients in
which we would act in terms of prevention In coronary syndromes the goal is instead to evaluate coronary heart disease from
mild to more extensive and significant forms For this purpose it is necessary to use parameters that investigate different and
complementary aspects stenosis ischemia the morphology of the atherosclerotic plaque metabolic processes in particular
vitality and apoptosis the presence of inflammatory processes The possibility already present thanks to Hybrid Imaging of
joining exams that study different aspects will allow the patient to be increasingly characterized not only from a diagnostic
point of view but also from a prognostic and personalized therapeutic choice Applied Calculus Student Solutions Manual

the fifth update of second edition One of the main features has been the adoption of new and revised international standards
notably the International Standard Identifier for Libraries and Related Organizations the ISBN 13 and the linking ISSN New
fields have been added for recording the Persistent Record Identifier Uniform Conventional Headings for Legal and Religious
texts are now catered for with separate fields A number of fields have been revised archival materials manuscripts and

Sandstedt, 2020-10-20 Computed tomography CT is an increasingly used modality for investigations of patients with
suspected coronary artery disease CAD Technical advances could improve diagnostic accuracy and lead to clinical workflow
improvements Also more prognostic information can optimize clinical follow up strategies and treatments The general aim of
this thesis was to explore the use of CT for CAD investigations Three studies aimed to examine new technologies including
the evaluation of an on site computed tomography based fractional flow reserve CT FFR software study I the evaluation of an
AI based calcium scoring computed tomography CSCT software study III and the evaluation of an photon counting detector
PCD CT study IV One study aimed to evaluate the long term prognostic value of coronary computed tomography angiography
CCTA in symptomatic patients with no history of CAD study II The software evaluation studies study I and III and the

prognostic study study II utilized CT data from clinical patients while the PCD CT evaluation study study IV used CT data from cadaveric specimens The performances of both software programs were compared with standard references being represented by fractional flow reserve FFR measurements study I and coronary artery calcification CAC scores from a semi automatic software study III respectively The PCD CT performance on CAC quantification was compared with corresponding results from an energy integrating detector EID CT using micro CT as the standard reference study IV The prognostic study merged registries to identify major adverse cardiac events MACE having a follow up time of up to 7 5 years study II The CT FFR and CSCT software correlation and agreement to corresponding standard references were good and excellent respectively Also both software programs had time saving potential study I and III The CAC quantification was more accurate using PCD CT than EID CT study IV The prognosis was excellent in patients with normal coronary arteries and progressively impaired in non obstructive and obstructive CAD study II The results in this thesis convey developmental technical CT technology advances for CAD investigations In addition prognostic follow up data is communicated The results may benefit patients by an increased accuracy in the CT evaluation of CAD and can contribute to improve clinical follow up strategies Furthermore the results suggest possibilities to improve the workflow in clinical radiology which potentially could impact health care costs
