*Complete regular microbiological testing using FUELSTAT® and regular visual inspections to establish a fuel quality trendline. Knowing how your fuel quality is trending is an essential element to cost savings. Verify fuel is free of microbiological growth (MBG). If fuel is visually clear, but tests for MBG then treat with Biobor® JF.

**If fuel shows signs of contamination, treat with Biobor® JF, let soak for 24-48 hours and polish if needed.

***If fuel shows signs of contamination, treat with Biobor® JF, let soak for 48-72 hours and polish fuel and/or clean tank of all contamination. Remediate fuel quality issues with Biobor® additives if needed.

Corrosion Guide:

Corrosion Guide E. Rabald,2012-12-02 Corrosion Guide presents a list of corrosive agents and the trade names of materials including metallic and non metallic materials as well as alloys The book provides guidance in using the tabulated information This reference also lists relevant publications that deal with the properties of various materials This new edition provides more data that are not included in the previous edition The former edition fails to present enough information as the provided properties of the corrosive agents varies and other data are not available The release aims to minimize missing information about the subject matter This compilation of tabulated data provides description of each group of corrosive agents Elements and compounds under each group are listed along with their properties such as room temperature corrosion rate and composition The list of trade names of materials also describes the composition of each material The information contained in this book is intended to help practicing engineers deal with corrosion *Uhlig's Corrosion Handbook* R. Winston Revie,2011-04-12 This book serves as a reference for engineers scientists and students concerned with the use of materials in applications where reliability and resistance to corrosion are important It updates the coverage of its predecessor including coverage of corrosion rates of steel in major river systems and atmospheric corrosion rates the corrosion behavior of materials such as weathering steels and newer stainless alloys and the corrosion behavior and engineering approaches to corrosion control for nonmetallic materials New chapters include high temperature oxidation of metals and alloys nanomaterials and dental materials anodic protection Also featured are chapters dealing with standards for corrosion testing microbiological corrosion and electrochemical noise **Microbiologically Influenced Corrosion Handbook** S Borenstein,1994-01-01 MIC microbiologically influenced corrosion is the deterioration of metal by corrosion processes that occur either directly or indirectly as a result of the activity of living organisms This handbook explains the interdisciplinary nature of MIC the roles of microbiology metallurgy and electro chemistry are interrelated and complex The text also looks at welding heat treatment and other metallurgical and process variables relate to corrosion resistance special emphasis being placed on MIC Case histories are included and the means of detection diagnosis and monitoring are discussed Prevention mitigation and replacement of MIC are also examined Fundamentals of Materials Engineering- A Basic Guide Shashanka Rajendrachari,Orhan Uzun,2021-02-22 Fundamentals of Materials Engineering A Basic Guide is a helpful textbook for readers learning the basics of materials science This book covers important topics and fundamental concepts of materials engineering including crystal structure imperfections mechanical properties of materials polymers powder metallurgy corrosion and composites The authors have explained the concepts in an effective way and by using simple language for the benefit of a broad range of readers This book is also beneficial to the students in engineering courses at B Sc M Sc and M Tech levels *Best Practice Guide on the Control of Iron and Manganese in Water Supply* Adam Postawa,Colin Hayes,Alessandra Criscuoli,Francesca Macedonio,Andreas N. Angelakis,Joan B. Rose,Andrew Maier,Drew C.

McAvoy,2013-08-14 This Best Practice Guide on the Control of Iron and Manganese in Water Supply is one of a series produced by the International Water Association s Specialist Group on Metals and Related Substances in Drinking Water Iron and manganese are often found in soft upland water sources associated with natural organic matter and are also commonly found in the groundwater abstracted from confined and unconfined aquifers The presence of iron and manganese in water is one of the most frequent reasons for customers complaint due to aesthetic issues yellow brown and black or stains on laundry and plumbing fixtures These two metals can be removed fairly readily by physico chemical treatment The municipal treatment systems deployed derive benefit from their larger scale particularly in relation to control but the processes used are less suitable for the numerous small supplies that are the most common water supplies throughout Europe especially in rural areas One important source of iron in drinking water is from old corroded cast iron water mains historically the material used most commonly in supply networks Replacement and refurbishment is very expensive and the major challenge is how best to prioritize available expenditure The purpose for this Best Practice Guide on the Control of Iron and Manganese in Water Supply is to give readers the broad view of a problem based on state of the art compilation of the range of scientific engineering regulatory and operational issues concerned with the control of iron and manganese in drinking water The Guide is of interest to water utility practitioners health agencies and policy makers as well as students on civil engineering and environmental engineering courses Authors Dr Adam Postawa AGH University of Science and Technology Faculty of Geology Geophysics and Environment Protection Krakow Poland and Dr Colin R Hayes University of Swansea UK Chair of IWA Specialist Group on Metals and Related Substances in Drinking Water **Heat Exchanger Design Handbook** Kuppan
