Second International Conference on Chemical Engineering Education International Conference on Chemical Engineering Education 1987 robin,D. C. Freshwater,Institution of Chemical Engineers,1987 *Environmental Inorganic Chemistry for Engineers* James G. Speight,2017-05-10 *Environmental Inorganic Chemistry for Engineers* explains the principles of inorganic contaminant behavior also applying these principles to explore available remediation technologies and providing the design operation and advantages or disadvantages of the various remediation technologies Written for environmental engineers and researchers this reference provides the tools and methods that are imperative to protect and improve the environment The book s three part treatment starts with a clear and rigorous exposition of metals including topics such as preparations structures and bonding reactions and properties and complex formation and sequestering This coverage is followed by a self contained section concerning complex formation sequestering and organometallics including hydrides and carbonyls Part Two Non Metals provides an overview of chemical periodicity and the fundamentals of their structure and properties Clearly explains the principles of inorganic contaminant behavior in order to explore available remediation technologies Provides the design operation and advantages or disadvantages of the various remediation technologies Presents a clear exposition of metals including topics such as preparations structures and bonding reaction and properties and complex formation and sequestering *Fouling in Refineries* James G. Speight,2015-05-14 *Fouling in Refineries* is an important and ongoing problem that directly affects energy efficiency resulting in increased costs production losses and even unit shutdown requiring costly expenditures to clean up equipment and return capacity to positive levels This text addresses this common challenge for the hydrocarbon processing community within each unit of the refinery As refineries today face a greater challenge of accepting harder to process heavier crudes and the ongoing flow of the lighter shale oil feedstocks resulting in bigger challenges to balance product stability within their process equipment this text seeks to inform all relative refinery personnel on how to monitor fouling characterize the deposits and follow all available treatments With basic modeling and chemistry of fouling and each unit covered users will learn how to operate at maximum production rates and elongate the efficiency of their refinery s capacity Presents an understanding of the breakdown of fouling per refinery unit including distillation and coking units Provides all the factors crude types and refining blends that cause fouling especially the unconventional feedstocks and high acid crudes used today Helps users develop an analysis based treatment and control

strategy that empowers them to operate refinery equipment at a level that prevents fouling from occurring

High Acid Crudes James G. Speight, 2014-04-30 High Acid Crudes quickly gets the refinery manager and all other relative personnel up to date on this particular type of feedstock by providing an overview and relevant details of the identification of high acid crudes and their influence on the refinery's process units especially regarding corrosion potential. Covering the types, effects on the various refining units and proper acid stripping techniques, High Acid Crudes effectively trains refinery personnel with a quick reference guide for day to day use in today's refineries. Due to their discounted value but potential for higher production rates, refineries are accepting more of high acidic crude feedstocks otherwise referred to as opportunity or challenging crude oils. Refining of these resources is still increasing due to high oil prices with China dominating this market and doubling their production of high acid crudes by 2015. Processing these resources can significantly increase any refinery's productivity but knowledge and proper training for the refinery manager and crude supplier is key to reducing the risk that is commonly associated with high acid feedstocks while still maintaining clean production standards. Provides an overview of the identification of high acid crudes and their influence on the refinery's process units. Covers the types of high acid crudes, effects on the various refining units and proper acid stripping techniques. Trains refinery personnel as a quick reference guide for day to day use for today's refinery.
