Antenna Design for Narrowband IoT: Design, Analysis, and Applications Pattanaik, Balachandra, Saravanan, M., Saravanakumar, U., T R, Ganesh Babu, 2022-03-11 In internet of things IoT applications wireless connectivity is a key factor particularly those that need to be in transition or where wired communication is not effective or practicable For top notch connectivity of the Narrowband IoT NB IoT standard the 900MHz

frequency is generally used by most of the vendors. The radiation quality not only depends on the antenna geometry but on immediate surroundings. Additionally, the IoT product itself and the user of the product can strongly affect the resulting radiation pattern and other characteristics of the antenna. On the other hand, a suitable antenna should also have high efficiency and adequate bandwidth covering the desired frequency range. To take these effects into consideration, the whole IoT product must be included in the antenna simulations.

Antenna Design for Narrowband IoT Design Analysis and Applications provides the antenna design concept for narrowband internet of things applications. It performs a detailed analysis of the antenna and discusses the various antenna design concepts and structures. Covering a range of topics such as antenna design and antenna measurement systems, this book is ideal for industry professionals, research scholars, academicians, professors, and students.

Photonic Applications in Nonlinear Optics, Nanophotonics, and Microwave Photonics Roberto A. Morandotti, Harry E. Ruda, Jianping Yao, 2005. Proceedings of SPIE offer access to the latest innovations in research and technology and are among the most cited references in patent literature.

Computers and Devices for Communication Nikhil Ranjan Das, Santu Sarkar, 2021-02-03. This book gathers selected research papers presented at the 7th International Conference on Computers and Devices for Communication CODEC 2019 held at the Department of Radio Physics and Electronic University of Calcutta, India, on 19-20 December 2019. It includes recent research in the field of nanomaterials, devices, and circuits, microwave and light wave technology, communication, and space science and computer applications and control.

Antenna Design by Simulation-Driven Optimization Slawomir Koziel, Stanislav Ogurtsov, 2014-02-12. This Brief reviews a number of techniques exploiting the surrogate-based optimization concept and variable fidelity EM simulations for efficient optimization of antenna structures. The introduction of each method is illustrated with examples of antenna design. The authors demonstrate the ways in which practitioners can obtain an optimized antenna design at the computational cost corresponding to a few high fidelity EM simulations of the antenna structure. There is also a discussion of the selection of antenna model fidelity and its influence on performance of the surrogate-based design process. This volume is suitable for electrical engineers in academia as well as industry antenna designers and engineers dealing with computationally expensive design problems.

Recent Microwave Technologies Ahmed Kishk, Kim Ho Yeap, 2022-08-25. Microwave bands range from 300 MHz to 300 GHz of the electromagnetic spectrum. These signals can be used in communication, networking, astronomy, and biomedical engineering among other fields. This book provides a comprehensive overview of the physics of microwave signals, techniques for modeling these signals, uses of these signals in various fields, and the underlying principles of some of the latest microwave devices currently available.

Radio Engineering and Telecommunications Waveguide Systems in the Microwave Range Islam Islamov, 2023-08-26. The book systematizes numerical methods for modelling and synthesizing radio engineering and telecommunication systems in the microwave range of rectangular and circular waveguides. The author gives the theoretical foundations for the analysis and optimal synthesis of

these systems and presents the results of new research The book uses the HFSS complex to analyse optimize and synthesize microwave systems operating on E type and H type waves while providing the outcomes As a result of analysis and synthesis various microwave devices with improved technical and operational parameters have been developed and on their basis a new system of waveguide paths is proposed that connects the transmitter and antenna in TV towers The book is intended for engineers and scientists involved in the design of radio engineering and telecommunication systems
