Student Exploration: Refraction

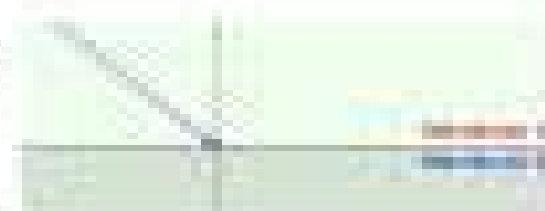

Learning Goals: Explain the relationship between the angle of incidence, frequency, and wavelength of light. Predict the direction of refraction for light passing from one medium to another.

Prerequisite Knowledge: Students should understand the concept of light as a wave and the relationship between frequency and wavelength.

- What would happen if light passed from one medium to another? (e.g., from air to water)?
- How does the speed of light change when it passes from one medium to another?
- What happens when light passes from one medium to another at an angle? (e.g., from air to water)?

Student Exploration

Light can travel through empty space, or **vacuum**. The speed of light is constant in a vacuum, but it changes when it travels through different materials. This happens because light travels slower in materials than it does in a vacuum. This is called **refraction**.
