

CA Endevor Software Change Manager Version 18.0.04

At a Glance

As the app economy continues to rely on mainframes as systems of record, a proven and reliable approach to securing and managing those assets is more critical than ever. Beginning with the first line of modified code through continuous build and deploy, demonstrating audit compliance, mandating test states and tracking change with strict authorization qualifications are essential for a successful release. CA Endevor® Software Change Manager (CA Endevor SCM) is designed to facilitate the software change process and naturally address DevOps challenges by governing agile processes and streamlining deployments, allowing for continuous delivery of software that helps differentiate and grow your business.

Key Benefits/Results for Personnel

- **Extends separation of duties and audit to further reduce risk.** Provides administrator traceability with conflict-of-interest user identifications.
- **Refines role-based security to decentralize administration.** Extends functions to developers.
- **Facilitates productivity.** Java System Services and Natural Developers gain streamlined functions.

Key Stories

Why Customers Asked for This

Administrator SMF capture and approver disqualification helps you use software change control to address the latest guidelines for auditors. Administrator traceability with comprehensive identification and restriction of conflict-of-interest assets from change authorization solidifies the compliance and control assistance capabilities of CA Endevor SCM.

With the adoption of agile practices, extending **role-based security** to include **after action** empowers developers to make refinements to change-set metadata to more quickly align to requirements associated with iterative development.

Mainframe Java® developers and Natural developers want the same experience as COBOL developers. Refinements to the native CA Endevor SCM **user interface** allow for uniform management of USS file structures, while new options help streamline the SCM process for Natural developers.

The **agile rollout** includes an incremental release identifier which facilitates easier management of software upgrades and maintenance for customers eager to adopt the continuous delivery model inherent in CA Endevor SCM.
