web solution verified by toppr by ohms law $i = v / r$ now if the current required is high the voltage should be high and the resistance should be low hence a low voltage supply from which one needs high currents must have very low internal resistance solve any question of current electricity with

web get a high voltage low current dc power supply quickly from us get back to your

precision current measurements on high voltage power supply - Oct 07 2022

web the requirement of monitoring high voltage power rails and interfacing with lower voltage components while being powered by a supply voltage as low as 1.7 v as shown in figure 3 in the event the system is placed into a shutdown or sleep state low voltage supplies powering the adcs microcontrollers and signal path amplifiers
