Cultural Boundaries Of Science Credibility On The Line:

Cultural Boundaries of Science Thomas F. Gieryn, 1999-01-15 Why is science so credible Usual answers center on scientists objective methods or their powerful instruments In his new book Thomas Gieryn argues that a better explanation for the cultural authority of science lies downstream when scientific claims leave laboratories and enter courtrooms boardrooms and living rooms On such occasions we use maps to decide who to believe cultural maps demarcating science from pseudoscience ideology faith or nonsense Gieryn looks at episodes of boundary work Was phrenology good science How about cold fusion Is social science really scientific Is organic farming After centuries of disputes like these Gieryn finds no stable criteria that absolutely distinguish science from non science Science remains a pliable cultural space flexibly reshaped to claim credibility for some beliefs while denying it to others In a timely epilogue Gieryn finds this same controversy at the heart of the raging science wars *Networked News, Racial Divides* Sue Robinson, 2018 Tracks power privilege and processes of community trust building in digitized media ecologies focusing on public dialogues about racial inequality

Varieties of Atheism in Science Elaine Howard Ecklund, David R. Johnson, 2021 Why study atheism among scientists Tried and found wanting how atheist scientists explain religious transitions I am not like Richard modernist atheist scientists Ties that bind culturally religious atheists Spiritual atheist scientists What atheist scientists think about science How atheist scientists approach meaning and morality From rhetoric to reality why religious believers should give atheist scientists a chance

Work at the Boundaries of Science C.L. Palmer, 2013-06-29 Interdisciplinary inquiry has become more pervasive in recent decades yet we still know little about the conduct of this type of research or the information problems associated with it This book is one of few empirical studies of interdisciplinary knowledge practices It examines how interdisciplinary scientists discover and exchange information and knowledge highlighting how the boundaries between disciplines affect how information is used and how knowledge is constructed It is written for scholars and practitioners with an interest in developing information systems and research environments to foster innovative scientific work Target groups include researchers in information science science studies communication as well as research administrators and information professionals

The Governance of Problems Robert Hoppe, 2011 A compelling new approach to public policy making as problem processing bringing together aspects of puzzling powering and participation and relating them to cultural theory issues about networks models of democracy and modes of citizen participation *Matthew Boulton* Sally

Baggott, 2016-05-13 Matthew Boulton was a leading industrialist entrepreneur and Enlightenment figure Often overshadowed through his association with James Watt his Soho manufactories put Birmingham at the centre of what has recently been termed The Industrial Enlightenment Exploring his many activities and manufactures and the regional national and international context in which he operated this publication provides a valuable index to the current state of Boulton studies Combining original contributions from social economic and cultural historians with those of historians of science

technology and art archaeologists and heritage professionals the book sheds new light on the general culture of the eighteenth century including patterns of work production and consumption of the products of art and industry The book also extends and enhances knowledge of the Enlightenment industrialization and the processes of globalization in the eighteenth century Communicating Popular Science S. Perrault, 2013-07-12 Technoscientific developments often have far reaching consequences both negative and positive for the public Yet because science has the authority to decide which judgments about scientific issues are sound public concerns are often dismissed because they are not part of the technoscientific paradigm they question This book addresses the role of science popularization in that paradox it explains how science writing works and argues that it can do better at promoting public discussions about science related issues To support these arguments it situates science popularization in its historical and cultural context provides a conceptual framework for analyzing popular science texts and examines the rhetorical effects of common strategies used in popular science writing Twenty six years after Dorothy Nelkin s groundbreaking book *Selling Science How the Press Covers Science and Technology* popular science writing is still not meeting its potential as a public interest genre *Communicating Popular Science* explores how it can move closer to doing so **Contemporary Conspiracy Culture** Jaron Harambam, 2020-04-22 In this ethnographic study the author takes an agnostic stance towards the truth value of conspiracy theories and delves into the everyday lives of people active in the conspiracy milieu to understand better what the contemporary appeal of conspiracy theories is Conspiracy theories have become popular cultural products endorsed and shared by significant segments of Western societies Yet our understanding of who these people are and why they are attracted by these alternative explanations of reality is hampered by their implicit and explicit pathologization Drawing on a wide variety of empirical sources this book shows in rich detail what conspiracy theories are about which people are involved how they see themselves and what they practically do with these ideas in their everyday lives The author inductively develops from these concrete descriptions more general theorizations of how to understand this burgeoning subculture He concludes by situating conspiracy culture in an age of epistemic instability where societal conflicts over knowledge abound and the Truth is no longer assured but out there for us to grapple with This book will be an important source for students and scholars from a range of disciplines interested in the depth and complexity of conspiracy culture including Anthropology Cultural Studies Communication Studies Ethnology Folklore Studies History Media Studies Political Science Psychology and Sociology More broadly this study speaks to contemporary public debates about truth and knowledge in a supposedly post truth era including widespread popular distrusts towards elites mainstream institutions and their knowledge The Oxford Handbook of the History of Quantum Interpretations Guido Bacciagaluppi, Olivier Darrigol, Thiago Hartz, Christian Joas, Alexei Kojevnikov, 2022 This Oxford Handbook provides a rigorous interdisciplinary review of the history of interpretations of quantum physics presenting the key controversies within the field as well as outlining its successes and its extraordinary potential across

various scientific fields **Science under Fire** Andrew Jewett, 2020-12-08 Americans have long been suspicious of experts and elites This new history explains why so many have believed that science has the power to corrupt American culture Americans today are often skeptical of scientific authority Many conservatives dismiss climate change and Darwinism as liberal fictions arguing that tenured radicals have coopted the sciences and other disciplines Some progressives especially in the universities worry that science's celebration of objectivity and neutrality masks its attachment to Eurocentric and patriarchal values As we grapple with the implications of climate change and revolutions in fields from biotechnology to robotics to computing it is crucial to understand how scientific authority functions and where it has run up against political and cultural barriers Science under Fire reconstructs a century of battles over the cultural implications of science in the United States Andrew Jewett reveals a persistent current of criticism which maintains that scientists have injected faulty social philosophies into the nation's bloodstream under the cover of neutrality This charge of corruption has taken many forms and appeared among critics with a wide range of social political and theological views but common to all is the argument that an ideologically compromised science has produced an array of social ills Jewett shows that this suspicion of science has been a major force in American politics and culture by tracking its development varied expressions and potent consequences since the 1920s Looking at today's battles over science Jewett argues that citizens and leaders must steer a course between on the one hand the naive image of science as a pristine value neutral form of knowledge and on the other the assumption that scientists' claims are merely ideologies masquerading as truths
