Cortex And Mind Unifying Cognition:

Cortex and Mind Joaquin M. Fuster, 2003 This book presents a unique synthesis of the current neuroscience of cognition by one of the world's authorities in the field The guiding principle to this synthesis is the tenet that the entirety of our knowledge is encoded by relations and thus by connections in neuronal networks of our cerebral cortex Cognitive networks develop by experience on a base of widely dispersed modular cell assemblies representing elementary sensations and movements As they develop cognitive networks organize themselves hierarchically by order of complexity or abstraction of their content Because networks intersect profusely sharing common nodes a neuronal assembly anywhere in the cortex can be part of many networks and therefore many items of knowledge All cognitive functions consist of neural transactions within and between cognitive networks After reviewing the neurobiology and architecture of cortical networks also named cognits the author undertakes a systematic study of cortical dynamics in each of the major cognitive functions perception memory attention language and intelligence In this study he makes use of a large body of evidence from a variety of methodologies in the brain of the human as well as the nonhuman primate The outcome of his interdisciplinary endeavor is the emergence of a structural and dynamic order in the cerebral cortex that though still sketchy and fragmentary mirrors with remarkable fidelity the order in the human mind

Mind, Brain and World Alfredo Pereira, Jr, Dietrich Lehmann, 2013-09-12 Issues concerning the unity of minds bodies and the world have often recurred in the history of philosophy and more recently in scientific models Taking into account both the philosophical and scientific knowledge about consciousness this book presents and discusses some theoretical guiding ideas for the science of consciousness The authors argue that within this interdisciplinary context a consensus appears to be emerging assuming that the conscious mind and the functioning brain are two aspects of a complex system that interacts with the world How can this concept of reality one that includes the existence of consciousness be approached both philosophically and scientifically The Unity of Mind Brain and World is the result of a three year online discussion between the authors who present a diversity of perspectives tending towards a theoretical synthesis aimed to contribute to the insertion of this field of knowledge in the academic curriculum

The Neuroscience of Freedom and

Creativity Joaquín M. Fuster, 2013-08-29 Joaquín M. Fuster is an eminent cognitive neuroscientist whose research over the last five decades has made fundamental contributions to our understanding of the neural structures underlying cognition and behaviour. This book provides his view on the eternal question of whether we have free will. Based on his seminal work on the functions of the prefrontal cortex in decision making, planning, creativity, working memory and language, Professor Fuster argues that the liberty or freedom to choose between alternatives is a function of the cerebral cortex under prefrontal control in its reciprocal interaction with the environment. Freedom is therefore inseparable from that circular relationship. *The Neuroscience of Freedom and Creativity* is a fascinating inquiry into the cerebral foundation of our ability to choose between alternative actions and to freely lead creative plans to their goal.

Creativity and Innovation Simona Doboli, Jared B. Kenworthy, Ali A. Minai, Paul B. Paulus, 2022-01-01 This book focuses on the emergence of creative ideas from cognitive and social dynamics. In particular, it presents data models and analytical methods grounded in a network dynamics approach. It has long been hypothesized that innovation arises from a recombination of older ideas and concepts, but this has been studied primarily at an abstract level. In this book, we consider the networks underlying innovation from the brain networks supporting semantic cognition to human networks such as brainstorming groups or individuals interacting through social networks and relate the emergence of ideas to the structure and dynamics of these networks. Methods described include experimental studies with human participants, mathematical evaluation of novelty from group brainstorming experiments, neurodynamical modeling of conceptual combination and multi-agent modeling of collective creativity. The main distinctive features of this book are the breadth of perspectives considered, the integration of experiments with theory, and a focus on the combinatorial emergence of ideas.
