

# DENSITY

Density is measured as the mass of an object divided by its volume. For example, if an object with a volume of  $50\text{cm}^3$  weighs 30 g, its density is  $30 \div 50 \text{ g/cm}^3$ , which is  $0.6 \text{ g/cm}^3$ .

Density determines whether a substance will sink or float when placed in a second substance. The substance with less density will always float.

Use the information provided to answer the questions below.

Find the density of the following:

| Substance                      | Volume in $\text{cm}^3$ | Mass in g | Density in $\text{g/cm}^3$ |
|--------------------------------|-------------------------|-----------|----------------------------|
| Gasoline                       | 5                       | 3.5       |                            |

Dreizler, 2011-02-14 Density Functional Theory DFT has firmly established itself as the workhorse for atomic level simulations of condensed phases pure or composite materials and quantum chemical systems This work offers a rigorous and detailed introduction to the foundations of this theory up to and

including such advanced topics as orbital dependent functionals as well as both time dependent and relativistic DFT Given the many ramifications of contemporary DFT the text concentrates on the self contained presentation of the basics of the most widely used DFT variants this implies a thorough discussion of the corresponding existence theorems and effective single particle equations as well as of key approximations utilized in implementations The formal results are complemented by selected quantitative results which primarily aim at illustrating the strengths and weaknesses of particular approaches or functionals The structure and content of this book allow a tutorial and modular self study approach the reader will find that all concepts of many body theory which are indispensable for the discussion of DFT such as the single particle Green's function or response functions are introduced step by step along with the actual DFT material The same applies to basic notions of solid state theory such as the Fermi surface of inhomogeneous interacting systems In fact even the language of second quantization is introduced systematically in an Appendix for readers without formal training in many body theory
