 together peer reviewed papers presented at the International Conference on Information Technology and Computer  
 Application Engineering held 10 11 December 2014 in Hong Kong China Specific topics under consideration include  
 Computational Intelligence Computer Science and its Applications Intelligent Information Processing and Knowledge  
 Engineering Intelligent Networks and Instruments Multimedia Signal Processing and Analysis Intelligent Computer Aided  
 Design Systems and other related topics This book provides readers a state of the art survey of recent innovations and  
 research worldwide in Information Technology and Computer Application Engineering in so doing furthering the  
 development and growth of these research fields strengthening international academic cooperation and communication and  
 promoting the fruitful exchange of research ideas This volume will be of interest to professionals and academics alike serving  
 as a broad overview of the latest advances in the dynamic field of Information Technology and Computer Application  
 Engineering **Fretting Wear, Fretting Fatigue and Damping of Structures** Toshio Hattori, 2023-12-26 This book  
 provides a comprehensive overview of the mechanical distinctions between fretting damage under axial or bending external  
 forces and fretting damage under a torsional load It emphasizes the importance of studying practical accident cases to  
 efficiently acquire technical skills The book is structured around the fundamental technologies of material science tribology  
 and mechanics which are vital for understanding and addressing technical issues The author has incorporated all fretting  
 countermeasure technologies which were previously often sensory and empirical in nature and repositioned them as  
 technologies grounded in fundamental principles The book proposes an economical approach to product operation that  
 maintains reliability by integrating not only design technology but also maintenance practices It delves into specific materials  
 such as titanium alloys and aluminum alloys which have seen increased use for weight reduction in industries like aerospace  
 In this book Critical Distance Stress Theory that can easily derive the fatigue limit and fatigue life of the stress singular field  
 at the contact edge was presented As a result the fretting fatigue strength and life can be predicted from the same FEM  
 stress analysis as the normal stress concentration part And finally introducing a novel fretting mechanical model the book  
 focuses on scenarios where pressure force  $N$  and repeated tangential force  $F$  are applied to two planar objects with the  
 tangential force being transmitted solely through friction at the contact surface This model finds relevance in turbine blade  
 connection structures among other applications The author references Asai's research example which encompasses fretting  
 mechanical analysis fretting wear evaluation fatigue assessment and structural damping evaluation using this model
