

NCGuide and NCGuidePro CNC Simulators

The key to unlocking the full potential of your operators, programmers and maintenance engineers lies in your ability to train them to use the many productivity tools incorporated into the equipment that you have purchased. Using an actual CNC or a machine tool to deliver the hands on experience that is vital to acquiring and demonstrating competence is often too expensive in investment and lost production costs.

NC Guide and NCGuidePro can simulate a wide range of CNC configurations, including lathes, machining centres and compound machining applications. Multiple display, MDI keyboard and option configurations can be selected and saved to match each of the CNCs being used in an organization.

NCGuide and NCGuidePro provide a very realistic simulated CNC environment that can be used for operational and maintenance training, part program and custom macro training, creation and testing, and custom software development, debug and testing. Simulation tools provide a safe environment where mistakes can be made and corrected without risk to the user or the machine tool. Practically everything that you can do on a CNC and machine tool can be achieved with these simulators, except for actual metal removal.

NCGuide provides an operation and part programming environment that includes the standard CNC editors and graphics simulations as well as the easy-to-use Manual Guide / interface. NCGuidePro adds the PMC ladder capability for a complete maintenance simulation and an advanced software development environment. When combined with other GE Fanuc software development tools, NCGuidePro provides a rich, PC-based development environment. NCGuide and NCGuidePro simulators are available at a fraction of the cost of an actual CNC or machine tool.
