Complex Fuzzy Abstraction The Brain Logic:

It's Abstraction, Concretely John McGreal, 2017-02-21 John McGreal's three new books *It's Abstraction*, *Concretely*, and *It's Representation Really* continue the *It* Series published by Matador since 2010. They constitute another stage in an artistic journey exploring the visual and aural dialectic of mark, word, and image that began over 25 years ago. Emerging out of the first books on the *Bibliograph* published in 2016, initiated with *It's Nothing Seriously*, these new texts retain some of the same structural features. The *Bibliographs* contain the same focus on repetition and variation in meaning of their dominant motifs of representation, abstraction, and figuration, which have framed philosophical discourse on epistemology and ontology in aesthetics. Their chance placement in each *Bibliograph*, interspersed with one another, displaying and enhancing similarities and differences. At the same time, these works constitute a development in the aesthetic form of the *Bibliograph*. In earlier works on *Nothing*, *Absence*, and *Silence*, it was just a question of finding and transferring given textual references from their source to construct their *Bibliographs*, with the focus being on the strategic position of the latter within each book. In these new works, the concern has been with working on the line and shape of the references themselves, with their enhanced spatial form as well as that of each *Bibliograph* as a whole. In shaping and spacing the referential images, the place of words and letters became as important as their semantic to read in a new way on diverse contemporary issues across conventional boundaries in the arts and sciences at several levels of physical, psychical, and social reproduction.

Innovative Teaching and Learning Professor Lakhmi C. Jain, 2013-11-11 Presented are innovative teaching and learning techniques for the teaching of knowledge-based paradigms. The main knowledge-based intelligent paradigms are expert systems, artificial neural networks, fuzzy systems, and evolutionary computing. Expert systems are designed to mimic the performance of biological systems. Artificial neural networks can mimic the biological information processing mechanism in a very limited sense. Evolutionary computing algorithms are used for optimization applications, and fuzzy logic provides a basis for representing uncertain and imprecise knowledge. *Handbook of Fuzzy Computation* E. Ruspini, P. Bonissone, W. Pedrycz, 2020-03-05 Initially conceived as a methodology for the representation and manipulation of imprecise and vague information, fuzzy computation has found wide use in problems that fall well beyond its originally intended scope of application. Many scientists and engineers now use the paradigms of fuzzy computation to tackle problems that are either intractable.

An Abstract Approach to W-Structures Based on Hypersoft Set with Properties Muhammad Saeed, Atiqe Ur Rahman, Muhammad Imran Harl, 2022-03-01 Hypersoft set is an emerging knowledge of study which is projected to address the limitations of soft set for the entitlement of multi-argument approximate function. This function maps sub-parametric tuples to power set of universe. It emphasizes the partitioning of each attribute into its respective attribute-valued set that is missing in existing soft set-like structures.
