Control Of Complex Nonlinear Systems With Delay Springer Theses:

Controlling Synchronization Patterns in Complex Networks Judith Lehnert, 2015-11-06 This research aims to achieve a fundamental understanding of synchronization and its interplay with the topology of complex networks Synchronization is a ubiquitous phenomenon observed in different contexts in physics chemistry biology medicine and engineering Most prominently synchronization takes place in the brain where it is associated with several cognitive capacities but is in abundance a characteristic of neurological diseases Besides zero lag synchrony group and cluster states are considered enabling a description and study of complex synchronization patterns within the presented theory Adaptive control methods are developed which allow the control of synchronization in scenarios where parameters drift or are unknown These methods are therefore of particular interest for experimental setups or technological applications The theoretical framework is demonstrated on generic models coupled chemical oscillators and several detailed examples of neural networks

Dynamics of Complex Autonomous Boolean Networks David P. Rosin, 2014-12-31 This thesis focuses on the dynamics of autonomous Boolean networks on the basis of Boolean logic functions in continuous time without external clocking These networks are realized with integrated circuits on an electronic chip as a field programmable gate array FPGA with roughly 100 000 logic gates offering an extremely flexible model system It allows fast and cheap design cycles and large networks with arbitrary topologies and coupling delays The author presents pioneering results on theoretical modeling experimental realization and selected applications In this regard three classes of novel dynamic behavior are investigated i Chaotic Boolean networks are proposed as high speed physical random number generators with high bit rates ii Networks of periodic Boolean oscillators are home to long living transient chimera states i e novel patterns of coexisting domains of spatially coherent synchronized and incoherent desynchronized dynamics iii Excitable networks exhibit cluster synchronization and can be used as fast artificial Boolean neurons whose spiking patterns can be controlled This work presents the first experimental platform for large complex networks which will facilitate exciting future developments

Delay-Coupled Complex Systems Valentin Flunkert, 2011-06-25 This work addresses time delay in complex nonlinear systems and in particular its applications in complex networks its role in control theory and nonlinear optics are also investigated Delays arise naturally in networks of coupled systems due to finite signal propagation speeds and are thus a key issue in many areas of physics biology medicine and technology Synchronization phenomena in these networks play an important role e g in the context of learning cognitive and pathological states in the brain for secure communication with chaotic lasers or for gene regulation The thesis includes both novel results on the control of complex dynamics by time delayed feedback and fundamental new insights into the interplay of delay and synchronization One of the most interesting results here is a solution to the problem of complete synchronization in general networks with large coupling delay i e large distances between the nodes by giving a universal classification of networks that has a wide range of interdisciplinary

applications *Frequency-domain Approach To Hopf Bifurcation Analysis: Continuous Time-delayed Systems* Franco Sebastian Gentile, Jorge Luis Moiola, Guanrong Chen, 2019-10-07 This book is devoted to the study of an effective frequency domain approach based on systems control theory to compute and analyze several types of standard bifurcation conditions for general continuous time nonlinear dynamical systems A very rich pictorial gallery of local bifurcation diagrams for such nonlinear systems under simultaneous variations of several system parameters is presented Some higher order harmonic balance approximation formulas are derived for analyzing the oscillatory dynamics in small neighborhoods of certain types of Hopf and degenerate Hopf bifurcations The frequency domain approach is then extended to the large class of delay differential equations where the time delays can be either discrete or distributed For the case of discrete delays two alternatives are presented depending on the structure of the underlying dynamical system where the more general setting is then extended to the case of distributed time delayed systems Some representative examples in engineering and biology are discussed **Control of Complex Nonlinear Systems with Delay** Philipp Hövel, 2010-09-27 This research addresses delay effects in nonlinear systems which are ubiquitous in various fields of physics chemistry biology engineering and even in social and economic systems They may arise as a result of processing times or due to the finite propagation speed of information between the constituents of a complex system Time delay has two complementary counterintuitive and almost contradictory facets On the one hand delay is able to induce instabilities bifurcations of periodic and more complicated orbits multi stability and chaotic motion On the other hand it can suppress instabilities stabilize unstable stationary or periodic states and may control complex chaotic dynamics This thesis deals with both aspects and presents novel fundamental results on the controllability of nonlinear dynamics by time delayed feedback as well as applications to lasers hybrid mechanical systems and coupled neural systems **Beyond Traditional Probabilistic Data Processing Techniques: Interval, Fuzzy etc. Methods and Their Applications** Olga Kosheleva, Sergey P. Shary, Gang Xiang, Roman Zapatrin, 2020-02-28 Data processing has become essential to modern civilization The original data for this processing comes from measurements or from experts and both sources are subject to uncertainty Traditionally probabilistic methods have been used to process uncertainty However in many practical situations we do not know the corresponding probabilities in measurements we often only know the upper bound on the measurement errors this is known as interval uncertainty In turn expert estimates often include imprecise fuzzy words from natural language such as small this is known as fuzzy uncertainty In this book leading specialists on interval fuzzy probabilistic uncertainty and their combination describe state of the art developments in their research areas Accordingly the book offers a valuable guide for researchers and practitioners interested in data processing under uncertainty and an introduction to the latest trends and techniques in this area suitable for graduate students **Universal Fuzzy Controllers for Non-affine Nonlinear Systems** Qing Gao, 2016-07-19 This thesis provides a systematic and integral answer to an open problem concerning the universality of dynamic fuzzy controllers It presents a number of novel ideas and

approaches to various issues including universal function approximation universal fuzzy models universal fuzzy stabilization controllers and universal fuzzy integral sliding mode controllers The proposed control design criteria can be conveniently verified using the MATLAB toolbox Moreover the thesis provides a new easy to use form of fuzzy variable structure control Emphasis is given to the point that in the context of deterministic stochastic systems in general the authors are in fact discussing non affine nonlinear systems using a class of generalized T S fuzzy models which offer considerable potential in a wide range of applications

Stability and Stabilization of Time-Delay Systems Wim Michiels,Silviu-Iulian Niculescu,2007-01-01 An overall solution to the robust stability analysis and stabilisation problem of linear time delay systems

Stability, Control, and Computation for Time-Delay Systems Wim Michiels,Silviu-Iulian Niculescu,2014-12-11 Time delays are important components of many systems in for instance engineering physics economics and the life sciences because the transfer of material energy and information is usually not instantaneous Time delays may appear as computation and communication lags they model transport phenomena and heredity and they arise as feedback delays in control loops This monograph addresses the problem of stability analysis stabilization and robust fixed order control of dynamical systems subject to delays including both retarded and neutral type systems Within the eigenvalue based framework an overall solution is given to the stability analysis stabilization and robust control design problem using both analytical methods and numerical algorithms and applicable to a broad class of linear time delay systems In this revised edition the authors make the leap from stabilization to the design of robust and optimal controllers and from retarded type to neutral type delay systems thus enlarging the scope of the book within control include new state of the art material on numerical methods and algorithms to broaden the book s focus and to reach additional research communities in particular numerical linear algebra and numerical optimization and increase the number and range of applications to better illustrate the effectiveness and generality of their approach

LMI Approach to Analysis and Control of Takagi-Sugeno Fuzzy Systems with Time Delay Chong Lin,Guo Wang,Tong Heng Lee,Yong He,2007-02-08 This book provides the latest developments in the analysis and control of nonlinear time delay systems using T S fuzzy model approach It presents a comprehensive up to date and detailed treatment of many interesting topics such as stability analysis stabilization fuzzy variable structure control fuzzy tracking control fuzzy observer design and filter design for T S fuzzy systems with time delay
