Programming the Tax Rate

Before you can proceed with registration of sales, you must first program the tax that is listed in accordance with the law of your state. Your cash register comes with the ability to program four different tax rates. In most states, you will only need to program Tax 1. However, if you live in an area that has a separate local tax (such as a Parcel Tax) or a hospitality tax, your register can be programmed to calculate these separate taxes.

In order to program the tax to be collected in accordance with the law of your state, you must specify the tax rate(s) and minimum taxable amount(s).

When you program the tax status for a department, tax will be automatically added to sales of items assigned to the department according to the programmed tax status for the department. You can also enter tax manually.

There are two tax programming methods. The tax rate method uses a straight percentage rate per dollar. The tax table method requires tax levels. You can enter your state or local tax officials. Use the method which is acceptable in your state. You can obtain necessary data for tax programming from your local tax office.

For tax table programming, see "Programming".

Tax Rate Programming

The percent rate specified here is used for tax calculation on taxable subsection. Turn the mode switch to the **2/FORM** position and use the following sequence to program the tax rate:

Q → **Q** → Tax Number(1-4) → **Q** → **Q**

→ **Q** → **Q** → **Q** → **Q**

where **Q** and **Q** represent the following:
Q Tax rate in 4 digits (leading zeros may be entered). If the rate is fractional (e.g., 4.5%), it should be converted to its decimal equivalent (4.5%) before entering.

Q Minimum taxable amount (0.01 to 99.9999). In some states, sales whose amounts are less than the minimum taxable amount are not subject to tax. If amounts \$0.01 to \$9.99 are not taxed, the value of **Q** should be 15 (for \$0.01), the value of the first taxable category.

Q Tax rate in 4 digits (leading zeros may be entered). If the rate is fractional (e.g., 4.5%), it should be converted to its decimal equivalent (4.5%) before entering.
