

ELECTRIC CHARGE

Electric charge is a property of matter that causes an attractive or repulsive force interaction with other electrically charged matter.

There are two types of charges: Positive & Negative

ELECTROMAGNETIC FIELDS

All electric charges produce an electromagnetic field. Electromagnetic field lines show the direction of the electromagnetic force at a given point.

INSULATORS

good insulators do not allow electric charge to pass through

CONDUCTORS

good conductors allow electric charge to pass through

Concepts Of Modern Physics: The Haifa

Lectures Mendel Sachs,2007-09-27 This book highlights foundational issues in theoretical physics in an informal open style of lecture It expresses the flow of ideas in physics from the period of Galileo and Newton to the contemporary ideas of the quantum and relativity theories astrophysics and cosmology as explanations for the laws of matter Rather than presenting the ideas of physics as a fait accompli the book leaves it up to the reader to decide which of these 20th century ideas in science will carry over to the 21st century for our further comprehension of the laws of nature in all domains from that of elementary particles to cosmology It is the contention of the author that our future progress in physics comprehension will only take place when the foundational controversies between the quantum and relativity theories are recognized and discussion is given to their resolution The book therefore presents an attitude not normally taken in other present day books on subjects in contemporary theoretical physics and cosmology a *Columbia Review High-yield Physics* Stephen D.
