Student Exploration: Refraction

Learning Goals: Explain the relationship between the angle of incidence, frequency, and wavelength of light. Predict the direction of refraction for light passing from one medium to another.

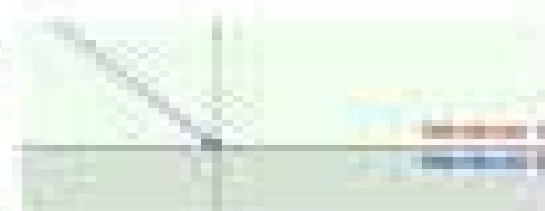

Prerequisite Knowledge: Students should understand the concept of light as a wave and the relationship between frequency and wavelength.

1. What would happen if light passed from one medium to another? (e.g., from air to water)?

2. How does the speed of light change when it passes from one medium to another? (e.g., from air to water)?

Student Exploration:

A light ray travels through a medium and reaches the boundary between two media. The ray is incident on the boundary at an angle. The ray is refracted into the second medium at a different angle. The refracted ray travels through the second medium at a different speed than the incident ray.

Student Exploration: The angle of refraction is θ_r .

3. What happens to the speed of light when it passes from one medium to another?

4. What happens to the wavelength of the light when it passes from one medium to another?

5. What happens to the frequency of the light when it passes from one medium to another?

Student Exploration: The angle of refraction is θ_r .

6. What happens to the speed of light when it passes from one medium to another? (e.g., from air to water)?
