As the app economy continues to rely on mainframes as systems of record, a proven and reliable approach to securing and managing those assets is more critical than ever. Why Customers Asked for This

Administrator SMF capture and approver disqualification helps you use software change control to address the latest guidelines for auditors. Administrator traceability with comprehensive identification and restriction of conflict-of-interest assets from change authorization solidifies the compliance and control assistance capabilities of CA Endeavor SCM.

With the adoption of agile practices, extending **role-based security** to include **after action** empowers developers to make refinements to change-set metadata to more quickly align to requirements associated with iterative development.

Mainframe Java® developers and Natural developers want the same experience as COBOL developers. Refinements to the native CA Endeavor SCM **user interface** allow for uniform management of USS file structures, while new options help streamline the SCM process for Natural developers.

The **agile rollout** includes an incremental release identifier which facilitates easier management of software upgrades and maintenance for customers eager to adopt the continuous delivery model inherent in CA Endeavor SCM.
