world's leading consumer of coal and energy and one of the worst hit victims of global warming. Consequently, China should assume its responsibility in making contributions to global sustainable development. Based on the principles of fairness and efficiency, this study creatively puts forward two principles of global governance on climate change. The first entails replacement of the two-group schema of developed and developing countries with a four-group model based on the Human Development Index (HDI). The second entails application of the resulting model to specify the major emitters as principal contributors to emission reduction. In addition, it proposes a two-step strategy for China to tackle the issue of climate change. This book makes it clear that China should proactively engage in relevant international cooperation, actively participate in international climate negotiations, make clear commitments to reduce emissions, and assume the obligations of a responsible power to achieve sustainable and green development.

Climate Change Law in China in Global Context Xiangbai He, Hao Zhang, Alexander Zahar, 2020-05-31. In *Climate Change Law in China in Global Context*, seven climate change law scholars explain how the country's legal system is gradually being mobilized to support the reduction of greenhouse gas emissions in China and achieve adaptation to climate change. There has been little English scholarship on the legal regime for climate change in China. This volume addresses this gap in the literature and focuses on recent attempts by the country to build defences against the impacts of climate change and to meet the country's international obligations on mitigation. The authors are not only interested in China's laws on paper; rather, the book explains how these laws are implemented and integrated in practice and sheds light on China's current laws, laws in preparation, the changing standing of law relative to policy, and the further reforms that will be necessary in response to the 2015 Paris Agreement on Climate Change. This comprehensive and critical account of the Chinese legal system's response to the pressures of climate change will be an important resource for scholars of international law, environmental law, and Chinese law.

China and the Global Politics of Regionalization Emilian Kavalski, 2016-05-23. This volume examines the prominent role of China in global politics and the relevance of the new regionalism paradigm to China's international outreach. It provides a comprehensive and critical assessment of China's impact on the global politics of regionalization, offers a novel application of analytical models, investigates the aspects of the Chinese practice of regionalization that set it apart, and demonstrates China's transformative potential in international life. Addressing the need to re-orient the research and policy agenda of international relations, this comprehensive study demonstrates both the lack of language to engage with existing norms and standards and the difficulty of applying them to an evaluation of the global politics of China's non-Western international agency.
