Chimpanzees Of The Lakeshore Natural History And Culture At Mahale:

Chimpanzees of the Lakeshore Toshisada Nishida, 2011-12-01 Chimpanzees are humanity's closest living relations and are of enduring interest to a range of sciences from anthropology to zoology. In the West many know of the pioneering work of Jane Goodall whose studies of these apes at Gombe in Tanzania are justly famous. Less well known but equally important are the studies carried out by Toshisada Nishida on the eastern shore of Lake Tanganyika. Comparison between the two sites yields both notable similarities and startling contrasts. Nishida has written a comprehensive synthesis of his work on the behaviour and ecology of the chimpanzees of the Mahale Mountains. With topics ranging from individual development to population specific behavioural patterns it reveals the complexity of social life from male struggles for dominant status to female travails in raising offspring. Richly illustrated the author blends anecdotes with powerful data to explore the fascinating world of the chimpanzees of the lakeshore.

Mahale Chimpanzees Michio Nakamura, Kazuhiko Hosaka, Noriko Itoh, Koichiro Zamma, 2015-09-10 Long term ecological research studies are rare and invaluable resources particularly when they are as thoroughly documented as the Mahale Mountain Chimpanzee Project in Tanzania. Directed by Toshisada Nishida from 1965 until 2011 the project continues to yield new and fascinating findings about our closest neighbour species. In a fitting tribute to Nishida's contribution to science this book brings together fifty years of research into one encyclopaedic volume. Alongside previously unpublished data the editors include new translations of Japanese writings throughout the book to bring previously inaccessible work to non Japanese speakers. The history and ecology of the site chimpanzee behaviour and biology and ecological management are all addressed through firsthand accounts by Mahale researchers. The authors highlight long term changes in behaviour where possible and draw comparisons with other chimpanzee sites across Africa to provide an integrative view of chimpanzee research today.

Wild Chimpanzees Adam Clark Arcadi, 2018-06-21 As our closest primate relatives chimpanzees offer tantalizing clues about the behavior of early human ancestors. This book provides a rich and detailed portrait of chimpanzee social life in the wild synthesizing hundreds of thousands of hours of research at seven long term field sites. Why are the social lives of males and females so different? Why do groups of males sometimes seek out and kill neighboring individuals? Do chimpanzees cooperate when they hunt monkeys? Is their vocal behaviour like human speech? Are there different chimpanzee cultures? Addressing these questions and more Adam Arcadi presents a fascinating introduction to the chimpanzee social universe and the challenges we face in trying to save this species from extinction. With extensive notes organized by field site and an appendix describing field methods this book is indispensable for students, researchers and anyone else interested in the remarkable and complex world of these intelligent apes.

Chimpanzee Kevin D. Hunt, 2020-08-20 The complete guide to our closest living relative drawing on thirty years of primate observation.

Apes and Human Evolution Russell H. Tuttle, 2014-02-17 Russell Tuttle synthesizes a vast literature in primate evolution and behavior to explain how apes and humans evolved in relation to one another and why humans became a bipedal tool.

making culture inventing species distinct from other hominoids He refutes the theory that we are sophisticated instinctively aggressive and destructive killer apes The Oxford Handbook of Evolutionary Perspectives on Violence, Homicide, and War Todd K. Shackelford, Viviana A. Weekes-Shackelford, 2012-08-23 This volume synthesizes the theoretical and empirical work of leading scholars in the evolutionary sciences to produce an extensive and authoritative review of this literature

Chimpanzees in Context Lydia M. Hopper, 2021-01-12 The study of the chimpanzee one of the human species closest relatives has led scientists to exciting discoveries about evolution behavior and cognition over the past half century In this book rising and veteran scholars take a fascinating comparative approach to the culture behavior and cognition of both wild and captive chimpanzees By seeking new perspectives in how the chimpanzee compares to other species the scientists featured offer a richer understanding of the ways in which chimpanzees unique experiences shape their behavior They also demonstrate how different methodologies provide different insights how various cultural experiences influence our perspectives of chimpanzees and how different ecologies in which chimpanzees live affect how they express themselves After a foreword by Jane Goodall the book features sections that examine chimpanzee life histories and developmental milestones behavior methods of study animal communication cooperation communication and tool use The book ends with chapters that consider how we can apply contemporary knowledge of chimpanzees to enhance their care and conservation Collectively these chapters remind us of the importance of considering the social ecological and cognitive context of chimpanzee behavior and how these contexts shape our comprehension of chimpanzees Only by leveraging these powerful perspectives do we stand a chance at improving how we understand care for and protect this species **The Chimpanzees of Rubondo**

Island Josephine Nadezda Msindai, Volker Sommer, 2022-10-05 How did a random batch of chimpanzees come to populate a small island in Tanzania where apes had never lived before Combining information gathered from fieldwork laboratory and archival research this book tells the unique story of chimpanzee babies taken from their forest homes in West Central Africa and sold to European zoos and circuses to then be shipped to Lake Victoria and set free on Rubondo Island These founder animals learnt what to eat how to build nests to breed and raise young ultimately forming a chimpanzee typical fission fusion society that today is thriving The authors compare the ecology behaviour and genetics of the Rubondo population with communities of wild chimpanzees providing exciting insights into how our closest relatives adjust to changing environments At the same time a reconstruction of the historical context of the Rubondo experiment reflects on its chequered colonial heritage and the introduction is viewed against current threats to the survival of apes in their natural habitats The book will be of interest to scholars and professionals working in primatology animal behaviour conservation biology and postcolonial studies Dispersing Primate Females Takeshi Furuichi, Juichi Yamagiwa, Filippo Aureli, 2015-06-05 Why do females in male philopatric species seem to show larger variation in their life history strategies than males in female philopatric species Why did females in human societies come to show enormous variation in the patterns of marriage residence and mating activities

To tackle these important questions this book presents the latest knowledge about the dispersing females in male philopatric non human primates and in human societies The non human primates that are covered include muriquis spider monkeys woolly monkeys gorillas chimpanzees bonobos and some species of colobine monkeys In these non human primate species females typically leave their natal group before sexual maturation and start reproduction in other groups into which they immigrate However there is a large variation as some females may breed in their natal group with some risks of inbreeding with their male relatives and some females may associate with males of multiple groups at the same time after leaving their natal group Such variation seems to provide better strategies for reproduction depending on local circumstances Although knowledge about female dispersal patterns and life history is indispensable for understanding the dynamic structure of primate societies it is still not known how females behave after leaving their natal groups how many groups they visit before finally settling down and which kinds of groups they choose to immigrate into due to the large variation and flexibility and the difficulty of tracking females after natal dispersal To encourage further progress in this important field this volume provides new insights on evolution of female dispersal by describing factors influencing variations in the dispersal pattern across primates and a hypothesis for the formation of human families from the perspectives of female life history This book is recommended reading for researchers and students in primatology anthropology animal behavior and evolution and for anyone interested in primate societies and human evolution

Chimpanzees and Human Evolution Martin N.

Muller, Richard W. Wrangham, David R. Pilbeam, 2017-11-27 Knowledge of wild chimpanzees has expanded dramatically This volume edited by Martin Muller Richard Wrangham and David Pilbeam brings together scientists who are leading a revolution to discover and explain human uniqueness by studying our closest living relatives Their conclusions may transform our understanding of human evolution
