Calculus An Intuitive And Physical Approach Second Edition Morris Kline:

Calculus Morris Kline, 2013-05-09 Application oriented introduction relates the subject as closely as possible to science with explorations of the derivative differentiation and integration of the powers of x theorems on differentiation antidifferentiation the chain rule trigonometric functions more Examples 1967 edition **Part Two** Morris Kline, 1967 A *First Course in Topology* Robert A Conover, 2014-02-20 Students must prove all of the theorems in this undergraduate level text which focuses on point set topology and emphasizes continuity The final chapter explores homotopy and the fundamental group 1975 edition **Elasticity** Pei Chi Chou, Nicholas J. Pagano, 1992-01-17 Written for advanced undergraduates and beginning graduate students this exceptionally clear text treats both the engineering and mathematical aspects of elasticity It is especially useful because it offers the theory of linear elasticity from three standpoints engineering Cartesian tensor and vector dyadic In this way the student receives a more complete picture and a more thorough understanding of engineering elasticity Prerequisites are a working knowledge of statics and strength of materials plus calculus and vector analysis The first part of the book treats the theory of elasticity by the most elementary approach emphasizing physical significance and using engineering notations It gives engineering students a clear basic understanding of linear elasticity The latter part of the text after Cartesian tensor and dyadic notations are introduced gives a more general treatment of elasticity Most of the equations of the earlier chapters are repeated in Cartesian tensor notation and again in vector dyadic notation By having access to this threefold approach in one book beginning students will benefit from cross referencing which makes the learning process easier Another helpful feature of this text is the charts and tables showing the logical relationships among the equations especially useful in elasticity where the mathematical chain from definition and concept to application is often long Understanding of the theory is further reinforced by extensive problems at the end of each chapter Linear Algebra Sterling K. Berberian, 2014-07-01 Introductory treatment covers basic theory of vector spaces and linear maps dimension determinants eigenvalues and eigenvectors plus more advanced topics such as the study of canonical forms for matrices 1992 edition **Commutative Algebra, Volume II** Oscar Zariski, Pierre Samuel, 2019-11-13 The second text in this two book series extends the classical material of Volume I which focuses on field theory and the ideal theory of Noetherian rings and Dedekind domains The connection of Volume II's material to algebraic geometry is stressed throughout the presentation making this book a practical introduction to some basic concepts and the arithmetical foundations of algebraic geometry The opening chapter deals with properties of places and is followed by a chapter that explores the classical properties of polynomial and power series rings and their applications to algebraic geometry The final chapter examines the theory of local rings which provides the algebraic basis for the local study of algebraic and analytical varieties Several helpful Appendixes conclude the text Theory of Flight Richard von Mises, 2012-04-27 Mises classic avoids the formidable mathematical structure of fluid dynamics while conveying by often unorthodox methods a full understanding of

the physical phenomena and mathematical concepts of aeronautical engineering **Representation Theory of Finite Groups** Martin Burrow, 2014-05-05 DIV Concise graduate level exposition covers representation theory of rings with identity representation theory of finite groups more Exercises Appendix 1965 edition div *Theory of Electromagnetic Wave Propagation* Charles Herach Papas, 2014-05-05 Clear coherent work for graduate level study discusses the Maxwell field equations radiation from wire antennas wave aspects of radio astronomical antenna theory the Doppler effect and more A Book of Set Theory Charles C Pinter, 2014-06-01 Accessible approach to set theory for upper level undergraduates poses rigorous but simple arguments Topics include classes and sets functions natural and cardinal numbers arithmetic of ordinal numbers and more 1971 edition with new material by author
