Center For Technical Knowledge,2019-12-24 The CATIA V5 6R2018 Sheet Metal Design learning guide enables you to create features that are specific to the sheet metal modeling process You are provided with a process based approach to creating sheet metal models Each step in the process is discussed in depth using lectures and several hands on practices This learning guide focuses on the Generative Sheet Metal Design workbench Topics Covered Generative Sheet Metal Design workbench Sheet Metal terminology Sheet Metal process Sheet Metal parameters Primary wall creation Profile Extruded Rolled and Hopper Defining walls Secondary walls Wall on edge automatic and sketch based Tangent Swept Cylindrical bends Bends from flat Unfolded view Corner relief Point and curve mapping Creating standard stamps surface stamp bead curve stamp flanged cutout louver bridge flanged hole circular stamp stiffening rib dowel Punch and die Punch with Opening Faces Sheet Metal features Corners chamfers cuts and holes Feature duplication Patterning rectangular patterns circular patterns User patterns Converting a solid part to sheet metal Output to DXF and drawing Prerequisites Access to the V5 6R2018 version of the software to ensure compatibility with this guide Future software updates that are released by Dassault Syst mes may include changes that are not reflected in this guide The practices and files included with this guide might not be compatible with prior versions i e V5 6R2017 Completion of the CATIA V5 6R2018 Introduction to Modeling course is recommended *AI Applications in Sheet Metal Forming* Shailendra Kumar,Hussein M. A. Hussein,2016-10-25 This book comprises chapters on research work done around the globe in the area of artificial intelligence AI applications in sheet metal forming The first chapter offers an introduction to various AI techniques and sheet metal forming while subsequent chapters describe traditional procedures methods used in various sheet metal forming processes and focus on the automation of those processes by means of AI techniques such as KBS ANN GA CBR etc Feature recognition and the manufacturability assessment of sheet metal parts process planning strip layout design selecting the type and size of die components die modeling and predicting die life are some of the most important aspects of sheet metal work Traditionally these activities are highly experience based tedious and time consuming In response researchers in several countries have applied various AI techniques to automate these activities which are covered in this book This book will be useful for engineers working in sheet metal industries and will serve to provide future direction to young researchers and students working in the area Sheet Metal Forming Processes Dorel Banabic,2010-06-21 The concept of virtual manufacturing has been developed in order to increase the industrial performances being one of the most efficient ways of reducing the manufacturing times and improving the quality of the products Numerical simulation of metal forming processes as a component of the virtual manufacturing process has a very important contribution to the reduction of the lead time The finite element method is currently the most widely used numerical procedure for simulating sheet metal forming processes The accuracy of the simulation programs used in industry is influenced by the constitutive models and the forming limit curves

models incorporated in their structure From the above discussion we can distinguish a very strong connection between virtual manufacturing as a general concept finite element method as a numerical analysis instrument and constitutive laws as well as forming limit curves as a specificity of the sheet metal forming processes Consequently the material modeling is strategic when models of reality have to be built The book gives a synthetic presentation of the research performed in the field of sheet metal forming simulation during more than 20 years by the members of three international teams the Research Centre on Sheet Metal Forming CERTETA Technical University of Cluj Napoca Romania AutoForm Company from Zurich Switzerland and VOLVO automotive company from Sweden The first chapter presents an overview of different Finite Element FE formulations used for sheet metal forming simulation now and in the past
