Review questions

2. What two units of measurement are necessary for describing speed?

Ans. Distance and time.

3. What kind of speed is registered by an automobile?

Ans. Instantaneous speed.

5. What is the average speed in kilometers per hour for a horse that gallops a distance of 15 km in a time of 30 min?

Ans. $\frac{15\text{km}}{\frac{1}{2}\text{hr}} = 30\frac{\text{km}}{\text{hr}}$

6. How far does a horse travel if it gallops at an average speed of 25 km/hr for 30 min.?

Ans. Our distance rule is given by $\Delta X = V_o t + \frac{1}{2} a t^2$. Since there is no acceleration, the rule simplifies to $\Delta X = V_o t = 25\frac{\text{km}}{\text{hr}} (.5\text{hr}) = 12.5\text{km}$

7. Distinguish between speed and velocity.

Ans. Speed is the rate at which an object changes its position. Velocity is the speed and direction of an object.

8. If a car moves with constant velocity, does it also move with constant speed?

Ans. Yes.

9. If a car is moving at 90 km/hr and it rounds a corner, also at 90 km/hr, does it maintain a constant speed? A constant velocity?

Ans. It maintains a constant speed but its velocity is changing because its direction of travel is changing.

10. Distinguish between velocity and acceleration.

Ans. Velocity is the speed and direction of an object. Acceleration is the rate at which an objects changes its velocity.

11. What is the acceleration of a car that increases its velocity from 0 to 100 km/hr in 10 seconds?

Ans. $a = \frac{\Delta V}{\Delta t} = \frac{V_o - V_i}{\Delta t} = \frac{100\text{km/hr}}{10\text{sec}} = \frac{10\text{km/hr}}{\text{sec}}$ forward.

Concepts of Mass in Contemporary Physics and Philosophy Max Jammer, 2009-06-08 The concept of mass is one of the most fundamental notions in physics comparable in importance only to those of space and time But in contrast to the latter which are the subject of innumerable physical and philosophical studies the concept of mass has been but rarely investigated Here Max Jammer a leading philosopher and historian of physics provides a concise but comprehensive coherent and self contained study of the concept of mass as it is defined interpreted and applied in contemporary physics and as it is critically examined in the modern philosophy of science With its focus on theories proposed after the mid 1950s the book is the first of its kind covering the most recent experimental and theoretical investigations into the nature of mass and its role in modern physics from the realm of elementary particles to the cosmology of galaxies The book begins with an analysis of the persistent difficulties of defining inertial mass in a noncircular manner and discusses the related question of whether mass is an observational or a theoretical concept It then studies the notion of mass in special relativity and the delicate problem of whether the relativistic rest mass is the only legitimate notion of mass and whether it is identical with the classical Newtonian mass This is followed by a critical analysis of the different derivations of the famous mass energy relationship $E = mc^2$ and its conflicting interpretations Jammer then

devotes a chapter to the distinction between inertial and gravitational mass and to the various versions of the so called equivalence principle with which Newton initiated his Principia but which also became the starting point of Einstein's general relativity which supersedes Newtonian physics The book concludes with a presentation of recently proposed global and local dynamical theories of the origin and nature of mass Destined to become a much consulted reference for philosophers and physicists this book is also written for the nonprofessional general reader interested in the foundations of physics
