World Avik Ghosh,2023-02-02 The Romans built enduring bridges well before Newton came along armed simply with a working knowledge of mechanics and materials In contrast today's bridge building is an elaborate enterprise involving CAD tools composite materials and acoustic imaging When technology is pushed to its limits a working knowledge proves inadequate and an in depth understanding of core physical principles both macroscopic and microscopic top down vs bottom up becomes essential We find ourselves today at a similar crossroad in semiconductor device technology where a working knowledge of solid state electronics is no longer enough Faced with the prohibitive cost of computing and the slowdown of chip manufacturing device scaling and the global supply chain the semiconductor industry is forced to explore alternate platforms such as 2 D materials spintronics analog processing and quantum engineering This book combines top down classical device physics with bottom up quantum transport in a single venue to provide the basis for such a scientific exploration It is essential easy reading for beginning undergraduate and practicing graduate students physicists unfamiliar with device engineering and engineers untrained in quantum physics With just a modest pre requisite of freshman maths the book works quickly through key concepts in quantum physics Matlab exercises and original homeworks to cover a wide range of topics from chemical bonding to Hofstadter butterflies domain walls to Chern insulators solar cells to photodiodes FinFETs to Majorana fermions For the practicing device engineer it provides new concepts such as the quantum of resistance while for the practicing quantum physicist it provides new contexts such as the tunnel transistor
