Cellular Signaling And Apoptosis Research:

Cellular Signaling and Apoptosis Research Alex R. Demasi, 2007 Apoptosis is the regulated form of cell death. It is a complex process defined by a set of characteristic morphological and biochemical features that involves the active participation of affected cells in a self-destruction cascade. This programmed cell death plays a critical role in physiological functions such as cell deletion during embryonic development, balancing cell number in continuously renewing tissues, and immune system development. Additionally, a dysregulation of apoptosis is underlying in numerous pathological situations such as Parkinson's disease, Alzheimer's disease, and cancer. A number of studies have pointed out an association between consumption of fruits and vegetables and certain beverages such as tea and wine, which are rich in polyphenols, with reduced risk of chronic diseases, including cancer. Apoptosis is also the regulatory mechanism involved in the removal of unnecessary cells during development and in tissue homeostasis in a wide range of organisms, from insects to mammals. This book focuses on cell apoptotic signalling.

Apoptosis, Cell Signaling, and Human Diseases Rakesh Srivastava, 2007-11-05 Apoptosis, Cell Signaling and Human Diseases: Molecular Mechanisms. Volumes 1 and 2 present a concise synthesis of recent developments in the understanding of both cell survival and apoptotic pathways. Particular attention is given to apoptosis in human diseases such as different forms of cancer. These comprehensive volumes integrate the most innovative and current findings. The contributors are at the forefront of scientific discovery.

Natural Compounds and Their Role in Apoptotic Cell Signaling Pathways, Volume 1171 Marc Diederich, 2009-09-08 Apoptosis is a highly regulated mechanism by which cells undergo cell death in an active way. As one of the most challenging tasks concerning cancer is to induce apoptosis in malignant cells, researchers increasingly focus on natural products to modulate apoptotic signaling pathways. This book reviews the main effects of natural compounds on the different apoptotic signaling pathways, including the intrinsic and extrinsic apoptosis pathways, the NF- κ B mediated pathway, the PI3K/Akt signaling, and other main pathways.

Among the topics specially covered are Effects of natural compounds on cancer cells Natural compounds as inducers of cell death Diet in health and disease Inflammation and cancer Natural compounds as kinase inhibitors Natural compounds in neurodegenerative diseases Natural compounds as inhibitors of ROS NOTE Annals volumes are available for sale as individual books or as a journal For information on institutional journal subscriptions please visit www.blackwellpublishing.com/nyas ACADEMY MEMBERS Please contact the New York Academy of Sciences directly to place your order www.nyas.org Members of the New York Academy of Science receive full text access to the Annals online and discounts on print volumes Please visit www.nyas.org/MemberCenter/Join.aspx for more information about becoming a member **Cell**
